10070. TR: New editor for REU

Yahoo group: navtexdx (2015)
Date: 2015-04-14 07:59:34 UTC
From: Vincent LECLER
Topic: 10070 Message: 10070

Hi All,

Since 2004, I was in charge to upgrade logs on REU...it is time for me to stop !

I thank Martin to give me the opportunity to do it..I have learn a lot !

Thanks also for you and your logs. Your contribution is doing REU/RNA and RWW.

Peter Conway, an old user, will take care for DSC log on REU,RNA and RWW. He starts tomorrow.

We need to find some one to take care of NAVTEX, HAM, OTHER, DGPS and TIME logs on REU.

Please send a mail direct to me.

Have fun !

Enjoy dx'ing

73 de Vincent F5OIH

Co-editor of REU (www.classaxe.com/dx/ndb/reu)

The official figures might be a lot better, but I'm not noticing much improvement from my installation.

Hello David,

<<< The official figures might be a lot better, but I'm not noticing much improvement from my installation. >>>

They must stay this way for at least 6 - 10 days, before "normal" conditions will return!

73,
Roelof, pa0rdt

Hello all,

Yesterday I have been testing an antenna and forgotten to restore the normal interconnecting cables. The weird thing is that neither the Afedri SDR nor YaND don't show any signs of life without a proper antenna connected!

73,
Roelof Bakker

Thanks for the hard work and dedication. The REU is a fantastic record
of our loggings, and you have done a fantastic job!

> Peter Conway, an old user, will take care for DSC log on REU,RNA and RWW. He

Peter is an ideal replacement and I wish him all the best. DSC in
REU/RNA/RWW is safe in his hands!

2014 : maximum year for solar cycle 24

- Posted on: 7 April 2015
- By: Frédéric Clette

Now that we completed the definitive sunspot numbers for 2014, we can conclude that the maximum of solar cycle 24 was reached in April 2014, with a maximum of the 13-month smoothed sunspot number at 81.8. Since then, solar activity has steadily declined (monthly mean sunspot number now around 40), but remained above 70 over many months, probably indicating that the annual mean for 2014 will also mark a yearly maximum at 78.9. Those values exceed the first peak of activity in cycle 24, which occurred in February 2012 but was short and only reached 66.9. Therefore, cycle 24 proves to be 30% weaker than the previous solar cycle, which reached 119.7 in July 2000, and thus belongs to the category of moderate cycles, like cycles 12 to 15, which were the norm in the late 19th and early 20th century. Compared to strong cycles, such cycles typically feature a broader maximum, with a 3-year plateau on top of which two or more surges of activity can produce sharp peaks of similar height (see graphic).In cycle 24, we indeed observed such a scenario, with two peaks separated by a particularly long plateau, lasting 18 months from early 2012 to mid-2013 (see graphic). Looking at the hemispheric numbers, we can see that the first peak was actually due to a maximum in the Northern hemisphere in November 2011, while the broader 2014 peak was due to the combination of a maximum in the Southern hemisphere in early 2014 and a slight reversal of the activity decline in the Northern hemisphere. The Southern hemisphere has thus been lagging the Southern hemisphere by about 26 months. This lag isn't new and was already present since cycle 20, i.e. over the last 45 years (see graphic). As this late maximum comes more than 5 years after the preceding minimum in December 2008, cycle 24 must have now entered its long declining phase, as none of the past observed cycles had longer delays between minimum and maximum. Therefore, the average solar activity should progressively decrease towards a minimum around 2020. However, over the next 2 or 3 years, we can still expect other strong but brief peaks of activity caused by the appearance of a few big complex groups, a typical feature of the late phase of solar cycles. Cycle 24 did not say its last word !

10080. Re: [navtexdx] NAVTEX from Zealand, HOL

Hello all,

Every night, I can hear NDB YQ, Sydney, CAN NS on 263 kHz, starting at about 01:00 UTC. This NDB is located close to NAVTEX station VCO. However at the 02:40 UTC timeslot of VCO, YQ-263 has faded out, indicating that there is no propagation. It comes back pre-dawn at about 03:30 UTC. VCO's next time slot is 06:40, but with the sun rising one hour earlier, the path is already closed.

10083. Navtex log from Antwerp,BEL 20150416

Yahoo group: navtexdx (2015)
Date: 2015-04-16 19:04:14 UTC
From: Dirk Claessens
Topic: 10083 Message: 10083

Hi all,
All received on the loop, pointing N/S.
Another "Northern Blackout": nothing from Bodo/Vardo, but Arkhangelsk made it, although weak.Even Varberg was scrambled. Interference from Izmir, almost on the null of the loop? Unlikely.

Regards - Dirk

From: k7wv@...
Topic: 10084 Message: 10084

Hello all;

I realize a search is on for a new REU Navtex editor. But I am wondering about the RNA/RWW logs posted here for CLE192 and on that have not yet been added to the database. Could the Navtex editor for these regions please add them?

Thank You!

From: david
Topic: 9398 Message: 10085

Another session of disappointments.
I am located significantly further North than most reporters, and the Swedes and Norwegians continue to come in here regularly. However, they are only 10 - 12 hundred kilometres away. As Dirk has pointed out previously, these stations have a very 'relaxed' attitude towards broadcast slots, appearing to transmit from any of their stations in any of their slots.
I also seem to have my mini-whip in a sweet-spot for Mondolfo, which pops up reliably. The Eastern half of the Mediterranean, however, remains stubbornly absent from the log.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On April 17, 2015
Receiver(s): Perseus
Antenna(s): MiniWhip at 6m

Hello Dirk,

Thank you for the solar cycle 24 update.
2020 is a long time to go yet....

I noticed yesterday that propagtion on 7 MHz was very poor.
There was an other solar disruption happening and the Kiel forecast
for the geomagnetic field today is a major storm!

Hello David,
I don't think your QTH up north is a disadvantage.John Pumford-Green GM4SLV is located on the Shetlands and in the past has posted impressive DX reports here in the group. His remote location has very low noise levels though.
Your QTH seems also ideal, very close to the sea.But what are your noise levels? Below is a screenshot of my Perseus (on the whip)
Noise floor here is +/- -120dBm, -125 on a good day, with RBW setting of 30.5Hz.It would be interesting to see what your situation is, it has struck me too that the eastern med is not showing up in your logs.
Regards - Dirk

Hello David, Dirk,

David, for some time I have also been wondering how your resulsts
can be improved.

Can you make a screenshot of HF-Span from 0-40 MHz?

This might give the first impression of your noise situation.

73,
Roelof

Hi All,

Reception over here has been quite reasonable again. here are my 2 K 's from last night

Those with the number, came in strings of this length.

20150416 1955 518 $09X SUZ Ismailia,EGY 3544 X 9

20150416 2054 518 $02F CTH Sao Miguel,AZR 2397 X 4

20150416 2123 518 $02I EAL Las Palmas,CNR 2693

20150416 2139 518 $03K SVK Kerkyra,GRC 2031 X 5

20150416 2153 518 $03L SVL Limnos,GRC 2402 X 5

20150416 2202 518 $03M 5BA Cyprus,CYP 3235

20150416 2225 518 $03O 9HD Malta,MLT 2090 X 5

20150416 2235 518 $03P 4XO Haifa,ISR 3567

20150417 0051 518 $03F TAL Antalya,TUR 2966 X 4

20150417 0111 518 $03H SVH Irakleion,GRC 2751

20150417 0238 518 $03P 4XO Haifa,ISR 3567

20150417 0246 518 $04Q VCO Sydney,CAN 4281 X 3

20150417 0247 518 $04Q VCO Sydney,CAN 4281

Subject: [ndblist] Navtex logs from Whitley Bay, ENG

Hello All,

An occasional log being unable recently to make regular contributions at the moment.
Using an experimental 5m wire loop and the ALA100M which is rotated to eliminate a local noise source.

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb
Receiver : Afedri SDR Net
Computer : Dual CPU 2.2Ghz
Decoder : YaND 6_4
Antenna : Wellbrook ALA100M with 5m wire loop.

From: david
Topic: 10018 Message: 10096

With the expert guidance of Dirk and Roelof, I am trying to find out what is causing the high noise on my received signals.
For one night only, I changed the antenna to a Wellbrook ALA100. This antenna was one of a pair that I used to use modestly successfully to monitor beacons in South East England. The results were not good, here.
Tomorrow, the AL1530 will get an airing.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

Hello all,

I found 11 perfect decodes from Las Palmas on 518 kHz, however
nothing at all from over the pond!

NAVTEX 490 kHz over 1500 km:

10101. Report from VE3EAR

Yahoo group: navtexdx (2015)
Date: 2015-04-20 12:21:01 UTC
From: John Bruce McCreath
Topic: 6963 Message: 10101

This is all I could manage to log overnight. I thought that the high winds had taken down my antenna, but it's still up there!

From: david
Topic: 9398 Message: 10102

Noise problems continue. I took down the old miniwhip, and have replaced it with a temporary one that I keep for portable use. In a cola bottle, it isn't pretty or waterproof. It isn't much of an improvement, either. Tomorrow, the Wellbrook loop.

From: david
Topic: 9398 Message: 10106

Hello All,

I tried the ALA1530 during the daytime, and decoded no Navtex signals at all. So it is back to the mobile miniwhip. Fortunately, the weather is calm and dry.

Session Report for David Atkins, GM8XBZ

From: Mike Thayne
Topic: 6159 Message: 10109

Hello All,
A string of 6 near perfect decodes from Astrakhan, otherwise pretty dull.

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Receiver: Icom IC735
Decoder: YaND
Antenna: Wellbrook ALA100LN with 10m wire loop (2x3m, 2x2m).

```

Hello all,

It is hard to believe, but I did receive two messages from VCO last night! The band noise is very low at the moment and the static season has not started yet.

NAVTEX 490 kHz over 1500 km:

20150423 2146 490 $01K TFA Grindavik,ISL 2045

10124. NAVTEX from Les Alpes Maritimes FRA 25042015

Yahoo group: navtexdx (2015)
Date: 2015-04-25 06:57:25 UTC
From: Frans.Vink@...
Topic: 10124 Message: 10124

Talinn and Las Plamas are really rare ones for me, so despite poor conditions, a better than expected little list.

From: roelof@...
Topic: 9398 Message: 10129

Hello all,

No T/A reception but otherwise not too bad.
The northern path seems to be open again with Archangelsk, Bodo and
Vardo coming in niceley.

NAVTEX 490 kHz over 1500 km:

From: david
Topic: 10018 Message: 10130

Two days at once, due to the prior claim of construction works yesterday;-(
Even for me, reception seems to be improving. No sign of the Canadians, yet, of course. The Norwegian stations are nearly always received here, but they are much closer to me than to most reporters and don't make the cut.

Hi all....

Received this on 518kHz YaND and Multipsk.4.28
Was wondering about source/station ID and location?

Hello Steve,

This is Cullercoats, ENG, which has the letter G assigned for
NAVAREA 1.

This also complies with the message content.

I received the same message this early morning:

10149. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-04-29 09:44:32 UTC
From: Dirk Claessens
Topic: 9398 Message: 10149

Hi Roelof,
Yes, Piombino Navtex was announced to be become active end 2014.From the IHO Navtex board:
http://www.google.be/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&uact=8&ved=0CCAQFjAA&url=http%3A%2F%2Fwww.iho.int%2Fmtg_docs%2Fcom_wg%2FCPRNW%2FWWNWS5%2FWWNWS5-3-3-1.1%2520-%2520Submission%2520by%2520Italy.pdf&ei=p6dAVbCRLYXyOK34gNAE&usg=AFQjCNG-ixKP_ITmGIVcDpf2IZZcmIBbXQ&sig2=wYGEMf1XDJfuZMqTMdCI4A&bvm=bv.91665533,d.ZWU
2. Due to Italian geography, during these 20 months, some lack of coverage was identified in the western part of Ligurian Sea.
In order to solve the mentioned issue, Italian Navtex coordinator requested to Secretary IMO NAVTEX Coordinating Panel the allocation of a B1 character for 490khz only use. The Panel allocated to Italy the use of a B1 characters (N).
The new NAVTEX station will be located in Piombino (see Annex 1). The coverage estimated range in maximum ground noise conditions is about 250 KM. The coverage area in medium conditions of propagation is about 600 KM. Piombino station will broadcast MSI in English language on frequency 490Khz and will become fully operational by the end of 2014.
Regards - Dirk

From: david
Topic: 10018 Message: 10150

Constant rain, so the antennas have still not been swapped to enable me to use the New Genuine mini-whip.

Even by my standards, this was a bad night - especially on 490kHz. On 518kHz, YaND corrected a couple of messages to include 'CANADA', but the coordinates had Northerly values that were much too small. So this is all we ended up with that was beyond 1400km.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

Hello Dirk,

Thank you very much for the information regarding Piombino Radio.
Interesting to read it is only intended for use on 490 kHz.

73,
Roelof

10153. More NAVTEX updates

Yahoo group: navtexdx (2015)

Attachments: 2 described; binary payloads are missing from this source WARC

Hi All,

There were some more NAVTEX updates in this week's Weekly notices to Mariners, and I have attached some screen dumps of these.

The main changes are to the name of Kerch in Ukraine, which is now known as Berdiansk, and also the new station in the Seychelles is now active as well.

It also says that Sellia Marina is inactive at the moment, so possibly something to do with Piombino being on air, though it is off on both 490 and 518, which suggests it might be a technical issue of some sort.

There is also a new edition of the GMDSS Circular (edition 17) out, and as well as giving the coordinates for Piombino, it also shows a few surprises, which I haven't yet been able to verify, such as the station in Algeria being known as 'Ain Taya Radio' and being in slot [K] on 490.0 kHz, and in slot [B] as before. What I can't work out is if the 490 station in slot [V] is still active, or if that has now gone and just the new slot is in use?

No sign of Piombino in any of the Notices though, so I suspect it is still in the testing phase at the moment. The co-ordinates shown for this in the GMDSS circular are:

Lat/Long: 42.55'36 N 10.32' 45 E

Range: 320 nm

73 for now, Alan.

Hi All,

Having had to give up my preselector, due to an OC in the ireplacible LF coil,

this was not too bad for last night's catches , with the longwire straight into the

Target HF3 cheap RX.

Hi Bob

Impressive decodes using that radio. :-)

I also have a Nasa Target HF3/w, but I don't use it much any longer because it drifts to much. But I did mod it for a while a go, so it's display are illuminated now with four green LED's. Since it was my only shortwave radio on my cabin earlier, I grew tired sitting on my cabin and use a flashlight on it's display each time I needed to change frequency, so I modded it. Now, it is degraded as a spare radio I don't use it much.

Regards
Geir, LA6LU

Hi Geir,

Yes, my Target HF3 does drift a little. In an unheated room it takes about 15 minutes from

cold to stabilise and then it does not drift enough to upset the YaND decoding.

The absence of a dial light is certainly very annoying and I have made a light to clip onto

the table and illuminate the beast !

It also requires a great deal of practice, spinning the frequency knob at the right speed to

get to the required setting in just a few seconds !

But it does the job and I got it for under £ 200 .

With a decent antenna, in a good location,YaND does not need much in the way of a receiver. For almost a year, I was using a small, almost " pocket " ETON E5, until I left it

out in the rain ! It spent several months in the airing cupboard but has never really got going

properly again !

I am lucky to have a very good location and a large, 300 year old, cedar tree in a convenient

place to take the end of a simple long bit of wire which goes through an " impedance matching " transformer to about 15 metres of 75 ohm TV coax to the " shack "

A few years ago I was using this set up to receive DRM transmissions regularly from Quito

in Ecuador and from New Zealand almost as good as Isle of Wight Radio.!

KInd Regards

Bob

Hi Bob,

Thanks for info. I believe I just set the YaND decoder to automatic tracking when I used my HF3, so it's drift was not really problematic receiving Navtex as I remember it.

Also, if you should be tempted to make the LED mod to the HF3 display yourself. You need 4 LED's to get the display properly illuminated. Also, use the flat ones, but not the ones that cast lights upwards when laying flat on a table. Those I used are also flat but looks like the normal round and casts their light out from their end as the round ones do. Since they was flat they was easier to attach inside the receiver.

I can send you a picture of it the next time I am at my cabin if you want to see how it looks with illumination.

Regards
Geir, LA6LU

From: roelof@...
Topic: 9398 Message: 10159

Hello Alan,

Thank you for the update regarding PIOMBINO RADIO.
I have again logged several normal messages, as far as my Italian goes. So, it looks like a normal service to me.
Sellia Marina is still on, at least on 518 kHz.

On April 26, I found this message on 490 kHz:

```
2015-04-26 01:55:22> ZCZC LA84
2015-04-26 01:55:24> 170900UTC APR 15
2015-04-26 01:55:27> CTA RADIO
2015-04-26 01:55:27>
2015-04-26 01:55:30> ARN NR 29/17.04.2015
2015-04-26 01:55:33> ROM.M.NEAGRA
2015-04-26 01:55:33>
2015-04-26 01:55:38> PLATFORMA DE FORAJ MARIN GSF
2015-04-26 01:55:43> DEVELOPMENT DRILLER II,EXECUTA
2015-04-26 01:55:47> OPERATIUNI AE FORARE IN PCT

Hi Roelof,
In the Navtex board document I posted yesterday, it was said that Piombino will use English.I'm guessing they are using Italian now in the initial test phase, so I'll wait and see how this develops before publishing an update for Yand.I got several UNIDs from "CTA RADIO" here to last night on 490.
Regards - Dirk

  Hello Alan,
Thank you for the update regarding PIOMBINO RADIO.I have again logged several normal messages, as far as my Italian goes. So, it looks like a normal service to me.Sellia Marina is still on, at least on 518 kHz.
On April 26, I found this message on 490 kHz:
2015-04-26 01:55:22> ZCZC LA842015-04-26 01:55:24> 170900UTC APR 152015-04-26 01:55:27> CTA RADIO2015-04-26 01:55:27> 2015-04-26 01:55:30> ARN NR 29/17.04.20152015-04-26 01:55:33> ROM.M.NEAGRA2015-04-26 01:55:33> 2015-04-26 01:55:38> PLATFORMA DE FORAJ MARIN GSF2015-04-26 01:55:43> DEVELOPMENT DRILLER II,EXECUTA2015-04-26 01:55:47> OPERATIUNI AE FORARE IN PCT2015-04-26 01:55:53> DE COORD: 44 20 88N-030 58 46E2015-04-26 01:55:57> A SE OCOLI LA O DIST.CORESP. 2015-04-26 01:55:58> 2015-04-26 01:55:59> DHM CTA2015-04-26 01:56:01> NNNN
I gather this is from Romania; however there is definitely a change from the former format of Constanta Radio. Last night I also found these messages.

From: bob.blodge@...
Topic: 9398 Message: 10165

Hi All,

Last night I decided to have a go on 490 after about 2 or 3 years since last time !

I was surprised with the quality of the decodes, presumably due to far less junk

from stations transmitting in the same channel at the same time !

I had 3 decodes from PIOMBINO, one long one in Italian and 2 short ones in

English.

The numbers after the stations are the " strings " of messages.

20150430 2130 490 $02J CTH Horta,AZR 2541

10167. Re: [navtexdx] NAVTEX Screen light on the HF3

Yahoo group: navtexdx (2015)
Date: 2015-05-01 15:11:25 UTC
From: bob.blodge@...
Topic: 9398 Message: 10167

Hi Geir.

Many thanks, but I don't feel like modifying this radio at the moment,

there are too many other things needing attention !

I will stick with my small LED flashlight in a clip lighting up the whole

front panel ! As they say in the US, " If it works, don't fix it " and I have

followed this course on many occasions.

KInd Regards

Bob

Hi All,

Not so good on 490 as previous report but there were 2 messages from

Piombino, both in English.

I have put in an approximate distance, the Atlas shows it as, more or less

the same distance as La Maddalena !

Hi all,
Daily log over 1500km.
The people smugglers in Lybia have started sending over their next "batch" it seems.

Regards - Dirk

Nice to have Split back at its own site. It saves all that editing of the YaND Log.

Hi Dirk,

Yes The people smugglers in Lybia have started sending over their next "batch" it seems as you say....and is on going so there will be sadly, more decoded messages such as yours to follow.....

73
Steve

Hi Roelof,

Thanks you for letting me know their status, I will update my lists accordingly.

Now if I could only find some time to actually do some listening myself.....

Thanks again and 73 for now,

Alan.

Hi All,

Poor results here last night, only 5 of the usual 2K mob, but a very

good string of 8 messages, all in English, decoded very well from

PIOMBINO.

Like many others, I was pleased to find a series of messages from Piombino.
Looks like I will have to update my Station List to reduce the report
editing.

Hello all,

Dirk, I will follow suit and also change to summer reports over 1000 km. Just a few more stations to report, which might look a bit better!

NAVTEX 490 kHz over 1000 km:

20150506 2142 490 $01K TFA Grindavik,ISL 2045
20150507 0020 490 $03C TAN Izmir,TUR 2309
20150507 0040 490 $03E IQM Mondolfo,ITA 1114
20150507 0120 490 $03I ICH La Maddalena,ITA 1228
20150507 0201 490 $03M EAV Cabo de la Nao,ESP 1497
20150507 0210 490 $03N PIOMBINO RADIO 1119
20150507 0231 490 $03P SVK Kerkyra,GRC 1821
20150507 0315 490 $02T EAC Tarifa,ESP 1856

NAVTEX 518 kHz over 1000 km:

20150506 1920 518 $03U IQM Mondolfo,ITA 1114
20150506 2030 518 $02D EAR Coruna,ESP 1283

Happy to follow Dirk's lead to include stations over 1000km.
I was also extremely happy to finally get a couple of messages from $03D Istanbul Turk Radio.
I celebrated by changing over the antennas during the day, so this should be the final report from the cola-bottle whip.

10201. New Version of "Rx_Log_And_Tuner.xls" available

Yahoo group: navtexdx (2015)
Date: 2015-05-09 06:49:59 UTC
From: Joachim Rabe
Topic: 10201 Message: 10201

Hi everyone,

I have just released version 1.0.8 of my MS-Excel-based software "Rx_Log_And_Tuner.xls".

It is available for download at http://www.k-code.de/rx-tuner/.

Apart from a number of bugs which have been fixed, I have added support for a number of receivers, a new main menu, backups for frequency lists and memory channel management for some receivers.

Here's a list of all changes in Ver. 1.0.8:

* added support for AOR AR-3000A
* added support for JRC NRD-345 (unfortunately not yet sufficiently tested)
* added support for JRC NRD-525 (unfortunately not yet sufficiently tested)
* added support for Lowe HF-150
* added support for R&S EK-890 (including extended functions)
* added support for TenTec RX-340
* added Support for Yaesu VR-5000
* added slider bar to scanner window for manual frequency selection while in "paused" mode
* added COM-port parameter configuration window for certain receivers
* added coordinates converter to calculate Maidenhead Locator
* added new main menu to ease operation
* added freq.-list export/import making version changes easier
* added possibility to use "MODE"-data in a separate column on every frequency list
* added memory management for selected receivers
* fixed bug in scanner module
* fixed bug in frequency selection
* fixed bug in cursor control
* fixed bug in list update
* fixed bug in ELAD FDM-S2 implementation
* disabled "navigate to end of list" at double-click on selected cell-border

Please have a look at the manual enclosed in the ZIP-file before you use RXLT.

A big "Thank You" to everyone who helped in testing, findings bugs etc.!

73s

First day with the new antenna at its permanent site.
Despite the reported rise in solar flux, 518kHz reception seemed to hold up.
490kHz, however, took a dip. We shall watch and see what the longer term
brings.

10205. Finger trouble at Malin Head??

Yahoo group: navtexdx (2015)
Date: 2015-05-09 16:29:11 UTC
From: david
Topic: 10205 Message: 10205

Sitting at the radio desk trying to find a source of RF noise, I was watching the two YaND decoder screens. At 1559, I saw a Gale Warning on 518kHz. The message was headed Malin Head Coastguard, and was numbered QB12, so there was no doubt.
Seconds later, the same channel broadcast message AE49. Proudly headed Malin Head Coastguard, it was the full Inshore Waters Forecast that usually goes out on 490kHz.

I guess someone forgot to change channels. It raises questions for me, because I had always assumed that switching would be an automated process. Perhaps someone with more knowledge of how stations with both channels available to them make the changeover could explain.

Best Wishes
David GM8XBZ

PS
Although the signal was decoded without error and plainly headed AE49, YaND logged it as a message with a 'Q' header like its predecessor.

10206. Re: [navtexdx] Finger trouble at Malin Head??

Yahoo group: navtexdx (2015)
Date: 2015-05-09 19:18:09 UTC
From: Dirk Claessens
Topic: 10205 Message: 10206

Hello David,
My guess is that there is an input console linked to each transmitter, and that whatever is entered into the console will be sent to that transmitter, regardless of the B1 character.
So yes, finger trouble.
The fact that Yand comes up with the correct station ID is because of identical unique keywords for both 518/490: /EJM for instance.

Regards - Dirk

Hi Roelof,

At the same time as yiu were getting those 2 messages from Sydney on 518

I had 3 messages on 490 which YaND identified as Sydney. They were not

as well decoded as yours, and they were in French !

Regards

Bob

10210. Re: [navtexdx] NAVTEX from Isle of Wight

Hello Bob,

A substantial part of Canada is French speaking, hence the French text!

There is also a NDB located in Sydney, Nova Scotia and that one is about the most regular one I can hear. It is there say about 355 days a year!

Best regards,
Roelof Bakker

10211. Re: [navtexdx] NAVTEX Isle of Wight

Hi Roelof,

Yes, but it was not clear from your lists of stations whether these

2 messages were on 490 or 518 Khz.

As you will see, mine are about one minute later than yours and

definitely on 490 !

At 0.210 and 02.11 there were 2 messages from PIOMBINO radio

but nothing in between.

From: roelof@...
Topic: 9398 Message: 10212

Hello Bob,

I did receive VCO on 490 and 518 kHz.

The 490 kHz raw files are below the 490 log and the raw files for
518 kHz follow after the 518 kHz log.

As far as I can see the your and mine time of reception on 490 kHz
agree to the second!

Best regards,
Roelof

10213. Log 518 kHz, Rotterdam HOL

10214. Navtex log from Antwerp,BEL 20150510

Yahoo group: navtexdx (2015)
Date: 2015-05-10 20:10:48 UTC
From: Dirk Claessens
Topic: 10214 Message: 10214

Hi all,
Daily log over 1000km.Good quality decodes from the eastern Med, but not a shred of T/A here.(yet?)
Regards - Dirk

The doldrums continue, with my best DX overnight being NMG, New Orleans, LA, USA with a huge distance of 1,704 km! The 630M band is equally sparse with WSPR-2 decodes of only the locals.

73, Bruce, VE3EAR

Hi Bruce,
Same here...The SILSO sun spot number is currently at ~118.For my QTH, it needs to be at ~50 or lower to have a chance for T/A.Long way to go...
Regards - Dirk

Hi Vincent,

Thank you for loading REU with my logs which piled up during your hospitalization.

You have been an outstanding and dedicated Editor for many years which I have greatly appreciated. Your personal circumstances should always come first and you should not feel guilty in "calling time".

I hope you continue to make good progress and I wish you every happiness.

73 de Mike G3GMS

Hi All,

I will take care of Navtex log until 31 of May.

Hope someone will bring the file before.

Have a nice day

10225. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-05-12 09:27:30 UTC
From: roelof@...
Topic: 9398 Message: 10225

Hello all,

A few weeks ago, I have acquired a new (for me) receiver.
It is the military version of the RFT EKD 515 and covers the frequency range from 10 kHz to 30 MHz. This unit was build in 1991 and went straight from the factory to the surplus market.

It is still in perfect shape, the only flaw was that the 18V power supply was set at 19.5 volt and the 5V supply at 5.6 volt. This could be easily adjusted. The EKD 515 has two 6 kHz wide filters for either side-band, which is a bit too wide for the ham bands. Fortunately, I could buy two 2.75 kHz filters at modest cost and these are now installed in this receiver.

It has 8 mechanical filters at the seconnd IF of 200 kHz: 150 Hz, 400 Hz, 750 Hz, 1750 Hz, 3100 Hz, 6000 Hz and for SSB now two 2750 Hz filters for upper and lower side-band reception.

This is an incredible receiver for CW reception and the recovered audio is the best I have encountered so far.

I have also used it for NAVTEX on 518 kHz with the 750 Hz filter and compared it with the reception of the Afedri SDR, which is used for NAVTEX here all the time. The antenna was a pa0rdt-Mini-Whip, fed via a four port splitter to the Afedri, two PERSEUS SDR's and the EKD 515.

There was no difference at all in the number of decodes flagged by YaND. Only when looking closely at the quality of the decodes, it appeared that the EKD 515 has the edge. I find this very reassuring and will continue to use the Afedri for NAVTEX on 490 and 518 kHz.

NAVTEX 490 kHz over 1000 km:

From: david
Topic: 10018 Message: 10231

I am continuing my long struggle to find and isolate the causes of interference to reception in what I had hoped would be a good site. There is still a long way to go (and domestic calls on my time and efforts still have priority), but there is small progress. At last, $03M Cyprus made it into the log. Only the first (identifying) part of the message made it but, for months, I have enviously read other listeners' reports of Eastern Mediterranean Navtex. I shall toast the station's arrival in Scotland with a [not too small] malt.

Topic: 10232 Message: 10232

Hi all,

It has been a while but I recently started to listen to navtex again. Yesterday I copied messages from KIBRIS TURK RADYO and CYPRUS TURKISH RADIO on 518 kHz. The same station I guess. I could not find any schedules for this station. I suppose that it transmits from the Turkish part of Cyprus. Any idea where the station's transmitters site is and if there are fixed skeds?

Hello Ary,
Cyprus Turkish Radio is an illegal station operated by Turkey, location unknown.A couple of years ago, there was an incident during a meeting of the IHO Navtex board, where Turkey demanded to have an extra Turkish navtex station to service the Turkish sea area of Cyprus. The request was firmly denied, as there is already the official Cyprus Radio/5BA station. Since then, the illegal station keeps popping up in the logs.They sometimes use the E-identifier of Samsun, or the X-identifier.
Given its location, my guess is that Antalya F is doing the actual transmissions.
Regards - Dirk

I am continuing my long struggle to find and isolate the causes of interference to reception in what I had hoped would be a good site. There is still a long way to go (and domestic calls on my time and efforts still have priority), but there is small progress. At last, $03M Cyprus made it into the log. Only the first (identifying) part of the message made it but, for months, I have enviously read other listeners' reports of Eastern Mediterranean Navtex. I shall toast the station's arrival in Scotland with a [not too small] malt.

Hi David,

I'd been suffering with a new interference problem for the past
week, and it had been driving me right up the wall. After checking
all of my aerials and changing all of the connecting cables, I
eventually tracked the culprit down to a small 'USB to COM Port
Adapter' that I'd installed recently to connect up a DGPS Receiver.

I would not have suspected that, as I don't recall having had any
trouble with them before, but the amount of low level hash it was
generating all over the bands was unbelievable.

Everything is lovely and quite again now, and the device is filed
away in the green cabinet (bin) under the bench.

Don't give up hope, I'm sure you'll find the source eventually.

Alan.

Hi Vincent,

Thank you for loading REU with my logs which piled up during your hospitalization.

You have been an outstanding and dedicated Editor for many years which I have greatly appreciated. Your personal circumstances should always come first and you should not feel guilty in "calling time".

I hope you continue to make good progress and I wish you every happiness.

Vincent, and all

I feel really guilty about the Navtex list. I find REU so useful in so many ways -- not only for Navtex logs -- that I feel almost obliged to give back something. But my personal circumstances mean that my time is only sporadically available for radio things at the moment, and I realise how important it is that the upload of logs is timely.
So here is the deal. If someone will take on the job of Navtex Logs Editor for the next five months and give Vincent his very well-earned break, I'll take on the job for at least two years starting at the end of October.
Surely someone can do that much.

Best Wishes
David GM8XBZ

I caught a mouse in the shack overnight. I think he must have eaten the 490 logs -- a very poor showing when I went through the reports this morning. However, local gales kept the local stations on the air long enough to block all those DX signals that were queuing up to get onto my antenna.

From: Dirk Claessens
Topic: 10244 Message: 10246

Hi Ary,
I was also monitoring 4209 last night.You may have overlooked the Nha Trang message below in your log.Very bad decoding quality, but the language is clearly phonetic Vietnamese. 4MHz can give interesting DX catches at times!

Regards - Dirk

10250. Report from VE3EAR

Yahoo group: navtexdx (2015)
Date: 2015-05-15 19:57:51 UTC
From: John Bruce McCreath
Topic: 6963 Message: 10250

No Navtex DX logged beyond NMA, Miami at just over 2,000 km. I'm going to be running WSPR-X in the WSPR-2 mode on 474.200 kHz. (dial) over the weekend.

73, Bruce, VE3EAR

From: roelof@...
Topic: 9398 Message: 10252

Hello all,

Contrary to what I wrote earlier this week, Sellia Marina, ITA,
seems to be still operational on 490 kHz!

NAVTEX 490 kHz over 1000 km:

```
20150515 2032 490 $03M EAV Cabo de la Nao,ESP 1497
20150515 2120 490 $03I ICH La Maddalena,ITA 1228
20150515 2157 490 $03L YQV Constanta,ROM 2027
20150515 2210 490 $03N PIOMBINO RADIO 1119

10254. Not a good advert for our hobby

Yahoo group: navtexdx (2015)
Date: 2015-05-16 16:07:24 UTC
From: Alan Gale
Topic: 10254 Message: 10254

Hi All,

I was just reading an article on an online blog which had appeared in the April 2015 edition of Spectrum Monitor. The thing that I found most disturbing was the reference to what happened with a report sent to a Norwegian NAVTEX Station, and I'm sure I'm not the only one who will be disgusted at just what damage the idiot involved may have done to any fellow DXers who send reports to them in future.

The original Spectrum Monitor article can be found here, and the NAVTEX item referred to in it can be found at the barentsdx link below that:

<http://medxr.blogspot.com.au/2015/05/the-qsl-cardat-what-cost.html>

<https://barentsdx.wordpress.com/2015/01/05/i-demmand-you-confirme-reception-report/>

There's always one. I wonder if it was the same guy that used to send out all the bogus medium wave reports to stations in the 1990s? I can't recall his name, but I do remember having a run in with him over a bogus report he sent to a MW station that I was involved with at the time.

Correction to that, I did just remember his name, and even discovered that there is a website devoted to his bogus reporting:

http://www.schoechi.de/bellabar.html

Alan.

Hello all,

On 490 khz two scrambled messages from Sydney, CAN NS were received.
The second once, albeit very poor, was flagged correctly by YaND!

Really strange propagation, still. Stations are either totally missing, or present with streams of messages.
Pinneburg - 490 $01L and 518 $01S - is a strong daytimer here, but falls frustratingly 7km short of the 1000km barrier.
However, I am full of happiness today, as $03B Alger made a welcome appearance with a group of messages. It may be an everyday signal to others, but it has been a mystery to me for a long time. Small pleasures make it all worthwhile.

10258. Navtex log from Antwerp,BEL 20150517

Yahoo group: navtexdx (2015)
Date: 2015-05-17 14:46:59 UTC
From: Dirk Claessens
Topic: 10258 Message: 10258

Hello all,
A somewhat longer log, improving conditions.
Regards - Dirk
P.S. No logs from me next week, I'm off to Andalusia,ESP for a short break.

```
QTH            : South of Antwerp, Belgium

10259. Re: [navtexdx] Navtex Log from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-05-17 15:06:09 UTC
From: roelof@...
Topic: 10018 Message: 10259

Hello David,

Alger is relatively rare here as well in winter, when it is always overrun by Bodo! If I receive it in winter, northern propagation must be very poor!

73,
Roelof Bakker

10260. Re: [navtexdx] NAVTEX from Isle of Wight

10262. NAVTEX from Isle of Wight

Yahoo group: navtexdx (2015)
Date: 2015-05-18 08:33:57 UTC
From: roelof@...
Topic: 9398 Message: 10262

Hello Bob,

It's where you live, that makes a lot of difference in T/A reception!
Last night I found just a scrambled messages on 490 kHz in French at 02:57 UTC, apparently from VCO. However on 518 kHz, I found an almost perfect message from VCO, albeit the Q in the header had gone missing!

NAVTEX 490 kHz over 1000 km:

```
20150517 2049 490 $03I ICH La Maddalena,ITA 1228
20150517 2250 490 $03R SVL Limnos,GRC 2147

10264. Navtex Log from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-05-18 17:28:01 UTC
From: david
Topic: 10018 Message: 10264

I have Irakleion on 490kHz listed as $03Q, and that was the slot I received it. But there were five clear messages that identified themselves with the letter "S".
I've corrected the log to "Q", but is there some sub-text here?

Only one log from 518kHz. Another shack computer that I was using for something else until 0130 seems to wipe out decoding on that channel ;-((

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On May 18, 2015
Receiver(s): Perseus
Antenna(s): genuine PA0RDT MiniWhip at 6m
Software: Studio 1; YaND 6.4 - two instances

Hello all,

For the first time since I started monitoring NAVTEX 490 kHz, a message from Saudanes, Iceland, was received in the 01:40 UTC time slot. Amazingly the same message was also transmitted on 518 kHz, using the same header and Icelandic language!

An other confirmation of the human factor:

From: roelof@...
Topic: 9398 Message: 10271

Hello all,

Due to the nights getting shorter and shorter, the T/A window is shrinking by the day. Not only is the period of darkness getting shorter, but the time of twilight is also much longer than at the spring and autumn equinox. This can clearly be observed on reception of Canadian NDB's.

As NAVTEX is using most of the time fixed time slots, the chances for T/A reception are much less than for reception of NDB's.
So, I am very pleased to report VCO on 490 kHz in the 02:50 UTC time slot.

NAVTEX 490 kHz over 1000 km:

```

Took out the Perseus and substituted the ELAD {because I prefer the Perseus for NDB listening}. No discernable difference.

20150522 0259 490 $04J VCO Sydney,CAN 4281

I can't help feeling that it is not simply my location that works the

magic but a lot of my success is due to my absolutely simple setup.

The long wire goes straight into a very cheap, off the shelf, radio and

into a very standard audio program in the computer,

OK, from here to Sydney is about 90 % over water but, surely, these

signals will be sky reflections.

I remember, a few years ago, I was DF ing DRM stations and of the four

receivers that I tried, an old American, totally analogue, receiver was the best, and I had excelent reception regularly from Quito,Equador and from New Zealand Radio ! Audio could have been from IOW Radio !

And that was from the same LongWire.

Kind Regards

Bob

Hello Bob,

Rest assured, your location is the determinating factor.
Peter Conway from Hastings managed to receive 20 different NDB's
from Brazil. He lives about 200 km as the crow flies from here.

How much I tried, I only managed to receive 12 and reception was
much worse than from Hastings.

Yes, I agree that you don't need much of a receiver for NAVTEX.
I compared a regenerative one transistor receiver and my PERSEUS
SDR. The PERSEUS was only marginally better....

My location is excellent for reception from Canada, but listeners 50
km from the coast do receive much less.

Best regards,
Roelof

10281. The lack of DX

Yahoo group: navtexdx (2015)
Date: 2015-05-23 13:20:34 UTC
From: John Bruce McCreath
Topic: 10281 Message: 10281

Despite the sun having settled down for a few days, my DX decodes seem to have dried up! I see it's not much better on the other side of the pond as well, so I think maybe it's time to
try some other activity until fall. I may post the odd report, but it won't be a daily occurrence.
Have a great summer everyone!

73, Bruce, VE3EAR

10283. Navtex logs 490 kHz 20-23/05/2015 from Tuscany Coast

Yahoo group: navtexdx (2015)
Date: 2015-05-23 13:54:37 UTC
From: Roberto Rizzardi
Topic: 10283 Message: 10283

Hi all,
I have monitored the 490 kHz channel for 24 hours a day and I can consider that the station of Piombino is no longer in the testing phase, but that it has become regular.
In the 10:10 and 22:10 slots the messages are in Italian, while in the other slots in the English language.
I found the only reference of the Piombino Radio Callsign in the William Hepburn site, where it is referred to as IGS, but nothing official and never reported in the received messages.
Here the logs by day and some raw:

20/05/2015 log
Report from : Roberto Rizzardi
QTH : Porto Santo Srefano (GR), Italy
Locator : JN52nk
Receiver : IC-R71E
Antenna : 75 cm side square MW tunable loop
Extra : Grahn GS2 controller
Decoder : YaND 6.4

```

From: roelof@...
Topic: 10281 Message: 10284

Hello Bruce,

When we have 5 more quiet days, things will perk up.
We are also approaching summer solstice, which narrows down the DX window for sure!

73,
Roelof, pa0rdt

From: david
Topic: 10018 Message: 10289

RF conditions continue to improve, although my own station has a long way to go. I have isolated another one of my noise sources, which turned out to be an old mobile phone charger that I had used to power a LED task lamp. It produces a nice carrier wandering around 490kHz. A lot of my noise is on the electrical mains. I have tried surge-suppressors, but they did not help. It would be nice to set up a station that is totally off the grid, but that is well beyond my hobby budget.
On a brighter note, I got a whole series of messages from $03B Alger to my East, and a broken but unequivocal message from $04J VCO Sydney to the West.
Happy days.

From: roelof@...
Topic: 10018 Message: 10303

Hello David,

Solar flux is below 100, which is good.
However, the slightest disturbance does deteriorate propagtion at the moment. That is what happened last night, indicated by the Kyoto Dst dipping at -24 at 01:00 UTC.

It is now back in the positive figures, but it will take a bit of time and no further disturbances for better propagation!

73,
Roelof, pa0rdt

Hi All,

Last nights 490 log. Many of the messages, even those that had all

the details and the name of the station, were not recognised by YaND

for some reason. This has not happened before and I cannot think of

any reason why last night was different !

20150527 2120 490 $03I ICH La Maddalena,ITA 1322

Hello Bob,

Did you select 490 kHz under Frequency in the upper right of the window?

I tend to forget this and get nothing flagged correctly!

73,
Roelof

10307. Re: [navtexdx] NAVTEX from Isle of Wight

Hello Roelof,

Yes, all seems to be on the right frequency and sideband and all the messages

which were designated as UNID were in the right place and the station names were

all present.

The missing identification was, strangely, on the Greek staions where there was a

number { 8 or 9) in sequence.

It will probably not happen again, but I have left everything as it was and we shall see !

I have never had this sort of thing before.

All the Best

Bob

10308. Navtex log from Antwerp, BEL 20150528

Hello all,
Back from piping hot Andalusia, "normal" temperatures are ~35 degC.
Propagation also "normal" for the time of year, just the usual suspects...
Regards - Dirk

Hello Dirk,

Nice building! I wonder if there is room for a few decent antennas!

Regarding the weather, we have yet to see a warm day here.
The temperatures have been a few degrees below the long standing average, which is 18 C at this time of the year.

There has been a very good opening from Canada in the early hours of the 24th, which did not reflect on NAVTEX though!

73,
Roelof

Topic: 10018 Message: 10312

As Roelof pointed out, the 'A', 'K', and Kyoto indices are still unfavourable, and that is reflected in the reception statistics. All the same, it was encouraging to receive a stream of messages from $03M Cyprus overnight. The station is a rare visitor to my log, and most welcome. Stations in its vicinity failed to decode, though, so I have a way to go yet.

From: roelof@...
Topic: 9398 Message: 10315

Hello all,

There is hope!

I don't know if you have read the latest ARRL propagation bulletin, sent by Alan Gale weekly to the list. This week Solar Flux and A-Index forecast is interesting:

>>>
The latest forecast from NOAA/USAF has solar flux at 90, 95, 100, 105 and 110 on May 29 through June 2, 115 on June 3-4, 125 and 120 on June 5-6, 115 on June 7-10, 110 and 105 on June 11-12, 100 on June 13-14, 95 on June 15, 90 on June 16-17, 95 on June 18-20, 100 on June 21-23 and 95, 90, 105, 110 and 115 on June 24-28, and 120 on June 29-30. Flux values then peak at only 125 on July 1-2, before dropping back below 100 on July 12.

Planetary A index is predicted at 12 and 8 on May 29-30, then 5 on May 31 through June 6, then 10, 25 and 20 on June 7-9, 12, 8 and 5 on June 10-12, then 8, 15 and 12 on June 13-15, 5 on June 16-23, then 8, 12 and 8 on June 24-26 and 5 on June 27-28.

<<<

The predicted Solar Flux is most of the time sligtly above 100, which is good for LF / MW propagation. There are a few disturbances as shown in the A-Index forecast,. However, the A-Index forecast for June 16-23 is only 5 and predicted Solar Flux is then 95 and 110. This might be a good week for NAVTEX.

Last night was not too bad either, as I found two much scrambled decodes from NMN, Portsmouth, USA, 6253 km. These were correctly flagged by YaND!

NAVTEX 490 kHz over 1000 km:

Hello Marcus,
You are the first YaND user located in South America and reporting here, so your logs are useful to update YaND's station database!South American stations are not receivable here in Europe, and only sporadically in the US.Below is a list of all stations located in Navareas 6 and 15.What you logged was most likely 06Q Mar Del Plata, ARG, in the 06:40 time slot.

For a full list, see: http://www.dxinfocentre.com/navtex.htm

From: Marcus PY3CRX PY2PLL
Topic: 10319 Message: 10322

Hi Dirk ...

Thanks for the info ...

Right after I sent the email I downloaded Alan Gale’s World NAvtex DB for DXERS to verify the time slot.

Back to 2009 there was a program like a spreadsheet with those information that changes dinamicaly ... I forgot the name, may be from a german guy.

I logged in the past several navarea 15 stations , easier than navarea 6. Always 518KHz, nothing on 490KHz yet.

Subject: Re: [navtexdx] RWW from GG66rf ...

Hello Marcus,

You are the first YaND user located in South America and reporting here, so your logs are useful to update YaND's station database!
South American stations are not receivable here in Europe, and only sporadically in the US.
Below is a list of all stations located in Navareas 6 and 15.
What you logged was most likely 06Q Mar Del Plata, ARG, in the 06:40 time slot.

For a full list, see: http://www.dxinfocentre.com/navtex.htm

WORLDWIDE Navtex Broadcasts MF Maritime Stations Station List Compiled by William Hepburn, LWCA 2015-04-27 OFFSHORE RADIO-TELEX BROADCASTS ...

Hi Marcus,

The program is called 'Navtexview' and you can
download the latest version of it from the NDB
List Datamodes page at: www.ndblist.info/datamodes.htm

Alan.

Hi Marcus,

The program is called 'Navtexview' and you can
download the latest version of it from the NDB
List Datamodes page at: www.ndblist.info/datamodes.htm

Alan.

Hello All,

The television Weather Report said that 'Summer' officially begins today.
They need an office with a window.

Radio conditions were a little better, though.

Hi David,

I don't know about Scotland, but here in Lancashire it feels more like the first day of winter. We seem to be permanently stuck in March at the moment! :-D

At least the summer static is staying away, so that's at least something to be grateful for.

Alan.

10329. Navtex log from Antwerp,BEL 20150601

Hi all,
Bodo and Vardo are enjoying 24 hours of daylight now, but they keep popping up in the logs with strong signals.

Regards - Dirk

Hello Dirk,

Yes, I have also excellent decodes from both stations at the moment.

It is no problem that VARDO is now 24/7 in "full" daylight.
What counts is the situation at the reflection point.
A single hop is about 2000 km, so the reflection point is more or
less 1000 km south of Vardo.

A quick view on Earth View reveales that the reflection point is in
darkness in the NAVTEX Vardo timeslot of 00:20 UTC.

If the sun stays quiet, my guess is that VARDO and Bodo will make it
through summer solstice!

We will see how it goes.

73,
Roelof

Hi Roelof,
Thanks for the explanation, I forgot about the reflection point !
73 - Dirk

Hello Dirk,

Yes, I have also excellent decodes from both stations at the moment.

It is no problem that VARDO is now 24/7 in "full" daylight.
What counts is the situation at the reflection point.
A single hop is about 2000 km, so the reflection point is more or
less 1000 km south of Vardo.

A quick view on Earth View reveales that the reflection point is in
darkness in the NAVTEX Vardo timeslot of 00:20 UTC.

If the sun stays quiet, my guess is that VARDO and Bodo will make it
through summer solstice!

We will see how it goes.

73,
Roelof

Hello all,

Truly perfect decodes from Sydney CAN NS were found on 490 kHz and 518 kHz. See the raw logs below.

The last message on 490 kHz was overrun by La garde , FRA.
On 518 kHz, the messages from Sydney were inerrupted by a string of four messages from Split, HRV.

The level of VCO on 490 and 518 kHz was about -100 dBm; 13 dB above the band noise in a bandwidth of 500 Hz.

Sunrise is now at 03:33 UTC.

NAVTEX 490 kHz over 1000 km:

10335. Navtex Log from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-06-02 09:24:33 UTC
From: david
Topic: 10018 Message: 10335

Hi All,

My weather station is not in an ideal spot, as it is in a sheltered part of the garden. All the same, I recorded wind gusts in excess of 85 mph (38m/s) early on Monday evening. My mini-whips are on glass-fibre poles which, at one point, were bent over to the horizontal. They recovered, and reception did not seem to be affected. As Alan remarked, at least we are spared the summer static.
Local stations were very excited about their gale warnings, and several potential DX logs were squashed by ad hoc local warnings, leaving mangled messages that might only be identified by detailed comparison with a clear copy from elsewhere. They remain in the UNID list.
These are the ones that came through:

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On June 02, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 6m
Software: Studio 1; YaND 6.4 - two instances

10336. Navtex log from Antwerp,BEL 20150602

Yahoo group: navtexdx (2015)
Date: 2015-06-02 09:33:11 UTC
From: Dirk Claessens
Topic: 10336 Message: 10336

Hello all,
Indeed, an outbreak of DX with strong signals from Canada!Sydney was hiding under Split, and immediately popped up in the log seconds after Split's transmission stopped.
The is consistent with the currently low ISN:
Regards - Dirk

Conditions continue to improve, although there is little chance of my decoding St Johns Canada unless someone throws a spanner in Malin Head's works.
These made it:

From: roelof@...
Topic: 10018 Message: 10346

Hello David,

I wonder if you have noticed my postings on the NDB-list regarding SM5BSZ's local noise video's.

I have checked my mini-whip cables using a battery powered mini-whip and portable, which showed that at LF things are clean, despite the fact that I have horrible local noise sources inside the house.

This morning I checked the cables for PLT on 24 MHz and this time they are not clean. However the noise is nothing compared with the roar I hear when walking along the underground power cables in front of the house.

Fortunately the ham bands are notched out.

73,
Roelof Bakker

Hi All,

T/A is not quite dead yet !

All of these from Sydney were good decodes but the last one was

terminated by La Garde !

20150604 0237 490 $03P SVK Kerkyra,GRC 2031

20150604 0249 490 $04J VCO Sydney,CAN 4281

20150604 0250 490 $04J VCO Sydney,CAN 4281

20150604 0251 490 $04J VCO Sydney,CAN 4281

20150604 0253 490 $04J VCO Sydney,CAN 4281

20150604 0255 490 $04J VCO Sydney,CAN 4281

20150604 0257 490 $04J VCO Sydney,CAN 4281

20150604 0258 490 $04J VCO Sydney,CAN 4281

20150604 0300 490 $04J VCO Sydney,CAN 4281

20150604 0301 490 $03S FRL La Garde,FRA 929

There were some other quite god long-distance stations.

Long Wire antenna and Palstar R30 receiver.

Regards

Bob

Hello Roelof,

Yes, a friend in SW England sent me a link that he got from the lf list. They are investigations I must carry out. I would have liked a bit more detail about the methods he used to suppress the interference. First, though I have to identify all of mine.
Unfortunately, a lot of it seems to be coming in on the mains supply. I am building a totally battery-powered station that will run overnight. Then, we can see how much difference that makes, and whether it is worthwhile doing serious work to clean up the mains supply. Thank heaven for the summer 'recess' so that we can prepare for the winter listening season.

Best Wishes,
David

Hello David,

I wonder if you have noticed my postings on the NDB-list regarding SM5BSZ's local noise video's.

I have checked my mini-whip cables using a battery powered mini-whip and portable, which showed that at LF things are clean, despite the fact that I have horrible local noise sources inside the house.

This morning I checked the cables for PLT on 24 MHz and this time they are not clean. However the noise is nothing compared with the roar I hear when walking along the underground power cables in front of the house.

Fortunately the ham bands are notched out.

73,
Roelof Bakker

Hello David,

Leif uses common mode chokes, however this is not (always)
necessary. He also did not succeed in getting it right for VLF.

The point is that the noise sources itself are always the problem.
Leif shows that when he locates the whip antenna far enough from his
house, the electric field of the local noise is no problem any more.

So rather than looking at all the noise sources you might encounter,
I suggest that you look at what is getting out of your house.
To do so, you can use a portable radio and measure what is on you
coax cable to the mini-whip. For a start, you can use the internal
ferrite bar antenna on longwave of low medium wave.

73,
Roelof, pa0rdt

Hello all,

Yesterday we had 30 + C temperatures in the Netherlands.
Today it is 18 C!

The heat has been driven away by a large thunderstorm complex, which
cuased a lot of interference. It shows in the log!

Hi Bruce ...

Sorry for the delayed answer ... the msg was at the spam folder :-(

Antenna was a 10m vertical wire + 2.4m ground rod (no match / no preamp)
followed by ~70m of foamed RG213.

Receiver is a SDR-IQ and software HDSDR. For NAVTEX = YaND

Hello all,

Solar flux was 133 yesterday, which is about 40 higher than a week ago. This does not enhance propagation and static did the rest!

10358. Update Yand Stations File

Yahoo group: navtexdx (2015)
Date: 2015-06-07 12:35:16 UTC
From: Giovanni Carboni IZ5PQT
Topic: 10358 Message: 10358

Hello folks

in the most recent YAND_STATIONS.TXT database the latitude of Piombino Radio is wrong, yielding incorrect distances (in my case 692 km instead of 80 km, since I am pretty close). It should be corrected to 42deg55' = 42.92

Good luck

73 Giovanni IZ5PQT

10359. Re: [navtexdx] Update Yand Stations File

Hi Giovanni,
Thanks foor spotting that typo of me 42.9... => 49.2...Fixed now.
Regards - Dirk

From: roelof@...
Topic: 9398 Message: 10367

Hello all,

The sun is playing havoc once more, however static was much less
than the night before. I found two excellent decodes from Astrakhan,
which has not been logged here for some time.

NAVTEX 490 kHz over 1000 km:

20150608 2040 490 $03E IQM Mondolfo,ITA 1114
20150608 2210 490 $03N IGS Piombino,ITA 1087
20150608 2235 490 $03P SVK Kerkyra,GRC 1821

Date: 2015-06-09 11:06:20 UTC
From: Mike Thayne
Topic: 5035 Message: 10368

Hello All,
Logs over 1500km, using temporary repositioned antenna (to help work in the garden!) seems to be ok.
Regards to all,
Mike,

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb
Receiver : Icom 735
Computer : Dual CPU 2.2Ghz

Severe local interference made decoding difficult. These are the only stations over 1000km that came through it.

Hi All,

Now that the storms have ceased, last night was quite good on 490

20150609 2030 490 $03D TAL Antalya,TUR 2966 X 6

20150609 2120 490 $03I ICH La Maddalena,ITA 1322

20150609 2200 490 $03M EAV Cabo de la Nao,ESP 1356

20150609 2231 490 $03P SVK Kerkyra,GRC 2031 X 6

20150609 2249 490 $03R SVL Limnos,GRC 2402 X 12

20150609 2345 490 $03W ICI Sellia Marina,ITA 1910

20150610 0006 490 $02A EAL Las Palmas,CNR 2693

20150610 0100 490 $02G CTV Monsanto,POR 1498 X 6

20150610 0130 490 $02J CTH Horta,AZR 2541 X 4

20150610 0257 490 $04J VCO Sydney,CAN 4281 X 5

20150610 0315 490 $02T EAC Tarifa,ESP 1651

20150610 0400 490 $02A EAL Las Palmas,CNR 2693 X 4

The numbers were of messages in the same " stream "

With a slight stretch or the imagination Sydney could have been 6

I also had 4 from Piombino but I don't have the right distance !

Antenna, long wire, receiver Palstar R 30.

Regards

Bob

Hi All,

Our house guests have left, taking with them a large collection of phone-chargers, laptop power supplies, and other 'essential' gadgets. Reception on 490kHz has been significantly improved. I'm still working on the 518kHz spectrum.

From: bob.blodge@...
Topic: 9398 Message: 10377

Hi All

A very strange thing happened on 490 last night. Conditions were not quite

so good, more thunder, but I logged precicely the same 12 messages, at the

same hour, from SVL Limnos GRC, as I had the night before !

The previous 4 messages were from different stations so it could not have

been some hiccup in the computer !

Sydney was not there !

Regards

Bob

Still Struggling.
Sub-1000km ranges give me streams of messages, so I know the system functions properly. These are the few messages from stations further away.

Hi All,

The list of received stations has got slightly longer, but there are still some glaring omissions. Generally speaking, if I receive a station, I get a stream of messages from it. On the other hand, I don't even get garbled messages in place of the missing stations. Of course, there is the occasional line of noise, but nothing that could be considered as part of a coherent broadcast.

10398. Navtex Log from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-06-17 10:09:38 UTC
From: david
Topic: 10018 Message: 10398

Hi All,

My Navtex set-up runs mostly unattended. One PC runs the Studio 1 software and an Elad FDM2. Another PC runs two instances of YaND, using an M Audio Delta soundcard. I extract the log each day and leave them to it.
Just before 2200 UTC yesterday (Tuesday) I noticed that the decoding spectra were frozen. Nothing at all had been decoded since about 1500. I could do everything with both instances of YaND, except get them to respond to the audio inputs, even though the M Audio control panel was showing the audio stream normally. The System log showed nothing untoward. In the end, I had to reboot the PC and all functions returned to normal. I can only assume it was an internal error between the soundcard and the CPU.

These are the logs over 1000km after 2200z

10403. Re: [navtexdx] NAVTEX FROM TUSCANY COAST ITALY

Yahoo group: navtexdx (2015)
Date: 2015-06-18 18:24:56 UTC
From: Dirk Claessens
Topic: 10402 Message: 10403

Hello Giuliano,
Very reasonable results, taking the time of year and the solar cycle into account.I noticed your Yand is still tagging Piombino as UNID on 490 KHz.
A station database update is available here:
https://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder/
If you haven't done this before, see the readme.txt in the same directory.
Regards - Dirk

Hi Roelof,
Despite a very low noise floor here the last days (-125 dBm @30Hz RBW), no shred of T/A here.The only noticeable thing was a message from Split being suddenly interrupted at the time your Sydney logs start.Mostly gibberish though.
Also note that exactly at the time where I log Split at 02:43:12, your first Sydney message comes through, weak and scrambled at first, then getting stronger, probably when Splits ends its transmission.
Location and propagation...

Regards - Dirk

Hello Dirk,

My guess is that location is the most important factor, everything else being equal.

I have been looking at Linrad and it is a most interesting software receiver. Unless the native PERSEUS software, it does an IQ recording in one single file.

In playback it is possible to run the file without audio decoding, which speeds it up considerable. With the proper settings a 500 kHz recording about 8 hours long (60GB) will play back in 15 minutes and showing the full recording on the waterfall. This is nice for NDB hunting as it shows when a particular (read Canadian) station appears and when the signal level peaks. I am still playing with it to get the hang of it as there are a lot of variables.

73,
Roelof

From: david
Topic: 10018 Message: 10409

A day of mixed fortunes.
I had to turn the PCs off in order to modify the power supply routes. Switched back on, and relaunched all the programmes without any issues, and checked that reception was OK.
When I looked at the logs this morning, there was a long stream of 'UNID' in one instance of YaND -- someone had omitted to change the default frequency from 518 to 490, and YaND couldn't find a match. So, I had to use the DBManager programme and change each individual line to 490. There is probably a quicker way, but individual lines is the only one I know. It was a thorough lesson in taking care not to do stupid things with computers. More than a hundred lines later, I was able to relaunch the instance of YaND, but the database had already decided that it could not identify the records and I had to go through each line again to check. And all my own fault.
However, I was rewarded by finding three indisputable messages from $04J VCO Sydney. My only concern is that the messages were all identified themselves with the Group Letter 'J', but were transmitted at 0255. As it turned out when I checked the 518kHz logs, these messages were transmitted on 490kHz immediately after the scheduled transmission on 518. Is this a normal state of affairs?

These are the logs

Hi David,
Congratulations for the Canadian T/A!Nothing seen here, so again: location is important.As you have found out, changing something in the database will not automatically cause Yand to "re-identify" messages.
The Sydney transmission you observed are normal, and indeed follow each other on
518/490:518: 04Q 02:40490: 04J 02:50

Thanks, Dirk.
Is there a guide to using the Database Manager? Sometimes there are errors that I would like to clear up, but I am very fearful of wrecking everything by blundering around.

Best Wishes
David

Hi David,
DBManager was not written by me, it came with the database engine Yand uses (Absolute Database by ComponentAce)AFAIK there is no user manual, and the Help function only specifies the programming interface.As long as you only edit individual records, there isn't really much you can do wrong.
But you should stay out of the Structure/index tab.In the SQL tab, straight SQL commands can be entered, and you can do very powerful things, including the mass deletion of records :0)
For a good tutorial on SQL see: SQL Tutorial

Hello David,

Congratulations with your VCO catches.
Maybe this will assure you that they are genuine catches, albeit
found in the 02:50 UTC time slot.

The same happened on June 4:

20150604 0253 490 $04J VCO Sydney,CAN 4564
20150604 0255 490 $04J VCO Sydney,CAN 4564
20150604 0257 490 $04J VCO Sydney,CAN 4564
20150604 0258 490 $04J VCO Sydney,CAN 4564

73,
Roelof, pa0rdt

Hello All,

What a difference a day makes! From Trans-Atlantic signals to near silence. Even reliable stations like Torshavn, [at under 700km and a normal regular] were missing. I even stripped down the RF chain to make sure there were no breaks. But it seems to be merely propagation.

This is all that I could find:

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

Hello David,

Last night the band noise was much stronger than the night before. This might be related to a solar event and if this is the case your relative northern location will be suffering much more than we do here "down under"!

73,
Roelof Bakker

Hello Roelof,

Yes, I keep finding out about the way the sun causes issues for us. It isn't as if we see a lot of it ;-)
Taking a positive view, at least my 'earth' connection won't dry out. But I keep trying to improve the station, and I follow the results from other listeners very keenly.

Kind Regards,
David

Hello All,

An improvement, although still not a patch on what I see in the reports from other listeners. I'm just pleased to be moving in the right direction.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On June 22, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 6m
Software: Studio 1; YaND 6.4 - two instances
Report Sorted by Frequency and Time

10423. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-06-23 09:04:26 UTC
From: roelof@...
Topic: 70 Message: 10423

Hello all,

I found four decodes from Ismailia, Egypt on 518 kHz, which is quite rare for this time of the year.
There is a severe geomagnetic storm in progress at the moment; the Kyoto Dst dropped like a stone to -195 at 05:00 UTC this morning.
T/A propagation does not look too good for the near future!

NAVTEX 490 kHz over 1000 km:

```
20150622 2120 490 $03I ICH La Maddalena,ITA 1228

Hello All,

Back to the propagation doldrums. As Roelof has pointed out, the indexes look really bad. My log agrees.

Hello All,

Still at the bottom of the class, but at least the overall standard seems to be rising a little.
The absence of northern decodes is very noticeable. Usually, I see a stream of messages from $01J Givlovshammar, generally running across the timeslots of other stations in the chain. But, last night saw only one message from them, and that collapsed into garble after a few lines. That still makes an improvement on yesterday's Northern reception.
Now, the weather forecasters are saying we might see the Northern Lights [Aurora Borealis]. Standing outside looking at them might be a better use of my time than trying to receive anything in their direction ;-)

Hello All,

My web browser [Firefox] has a plug-in that gives propagation indexes [Propfire by N0HR]. It just sits on the menu bar, and I look at it every time I launch the browser. If the A-index gets above single figures, I anticipate poor reception conditions. So I was tempted to shut down all the radios on Wednesday, when the A-Index was reported as 79. A check with the NASA site confirmed the figure, and I feared the worst.

True enough, I received nothing at all from stations to the North. Eastern stations are always a problem for me, but they were absent, too. However, stations to the South continued to decode with good Signal Quality figures, and $02P Madeira and $02I Las Palmas were welcome to return from a long absence.

Hello David,

There is yet an other HF radio black out in progress.
I checked it with my PERSEUS HF Span program and signals are 30 dB
down to normal!

73,

Hello David,

There is yet an other HF radio black out in progress.
I checked it with my PERSEUS HF Span program and signals are 30 dB
down to normal!

73,
Roelof Bakker

Hello All,

To add to the depressed propagation, I am getting heavy interference, especially on 490kHz. Turning off all power to my own house wasn't well received, and it also failed to eliminate the problem. Next, I need to find out what the neighbours have started using.

From: Dirk Claessens
Topic: 10442 Message: 10442

Hi all,
A very short log, but not entirely caused by propagation.Yestarday I had been playing with the sleep/standby settings of the PC, and had forgotten to set these back to the usual setting of not going into sleep/standby mode after xx minutes. :0)
Anyway, I learned something.When I woke up the PC this morning, both the Perseus client and Yand survived the sleep mode and were both fully responsive, but there was no signal or sound anymore. I kept Yand running and restarted the Perseus client: all OK.I'm guessing this has to do with the way the Perseus software handles the USB bus.If this goes out for whatever reason, the software does not attempt a retry action of some sort, it just sits there.

This also happens when the client is started without first powering up the Perseus box.
Regards - Dirk

Hello All,

Well, at least the interference has gone this morning. And so have the visitors who spent the weekend in the house next-door. Quite a coincidence! I had four carriers spaced at about 100Hz intervals (each with the same slight 'warble') centred squarely on 490kHz. YaND didn't stand a chance on anything but strong signals. I don't think there is anything I can do about it if that level of interference comes up again.
Reception was only marginally better over-night, but at least Rogaland came back. With the interference returning to only the mains-borne background we are used to, I'm hopeful for more Northern stations to reappear.

10446. RE: [navtexdx] Navtex log from Antwerp,BEL 20150628

Yahoo group: navtexdx (2015)
Date: 2015-06-28 20:14:47 UTC
From: david
Topic: 10445 Message: 10446

Dirk,

Thank you for making the comparison. It makes a fine perspective, even if it is not an enjoyable situation for us to be in today.

Best Wishes
David

Subject: [navtexdx] Navtex log from Antwerp,BEL 20150628

Hello all,

Conditions still dreadfull.
Absolutely nothing from the north.

Regards - Dirk

From: Dirk Claessens
Topic: 10448 Message: 10448

Hi all,
Slightly better conditions, Grindavik & Alger back.Nothing from Turkey though.

Regards - Dirk

10451. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-06-30 09:50:20 UTC
From: roelof@...
Topic: 70 Message: 10451

Hello all,

T/A propagation is back as I found a scrambled message from VCO, Sydney, CAN NL. There are very little clues for NAVTEX CANADA. The only one is NOTSHIP, which appears twice. The first one is in line 10: <,95`~80 .125 +> in reverse mode: NOTS~IPJMQWTJZ!

NAVTEX 490 kHz over 1000 km:

10452. Navtex Log from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-06-30 12:20:41 UTC
From: david
Topic: 10018 Message: 10452

Hello All,

I keep posting the logs, but it is a depressing despatch. Conditions and mains-borne interference are making reception difficult. I can't store enough power for a long-term mains-free session. Until I find a computer that will run from 12volts, and that will run two instances of YaND whilst driving an SDR, I have to make the best I can with what I have.
518kHz seemed particularly bad last night. Strong locals, but not even a corrupted message from the rest.

Session Report for David Atkins, GM8XBZ

Hello Bob,

I believe your Qusair catch is genuine.

I found a very much scrambled message at the same time, with a hint
to <Golf of Suez>. However too bad for including in my log entry!

73,
Roelof Bakker

Hi All,

Another fairly good night on 518.

For some reason that I have not worked out yet, my very simple
system, HF3 straight into YaND 6.4, works better on LSB than USB !

(The attached image shows a good reception period !)

One small step for [a] man ...

Hello All,
I have always been plagued with interference at this location. Our power comes on wooden poles down the back of our gardens (at 240volts) and I blamed the wires for radiating interference. But there were no locations -- or styles -- of antennas that would make any difference. Totally isolating my station from the mains supply confirmed the problem. I have interference in the incoming power supply. I don't know what it is. I have no equipment that can analyse the public supply. I know the interference varies from day to day; even from hour to hour. There has been no pattern.

I use computers for digital reception and transmission. There are a lot of them around the house, and I have tried using all of them without managing to eliminate the interference whenever I connected to the mains supply. Since I have no way of powering a computer overnight without a connection to the mains, I appeared to be stuck. I tried earthing equipment, and NOT earthing equipment. I tried a lot of ferrite, on mains and on antenna and interconnecting cables. I used audio isolators everywhere. Sometimes, I would think I had solved the problem. But it always turned out to be the variation in interference that was causing the results I saw.
Members of this list have tried to help. They gave a lot of their time and expertise, but the interference kept returning.

In desperation, I bought a mains filter on EBay. I can't find out anything about it besides the general description from the seller. But I had tried everything else, so I installed the filter in an extension lead and powered the Navtex system through it. Immediately, the YaND spectrum display seemed smoother. I left the set-up running overnight, and was thrilled to see a huge leap in the quantity and quality of decodes this morning.
I know that this is only one day, and that propagation has been extremely volatile. But I'm optimistic and, in case it helps someone else, I've added a picture of the unit. If anyone knows more about this unit or about other ways of cleaning the public supply, or even analysing it, I am keen to know.

Best Wishes
David GM8XBZ

Hi Roelof,

You obvious got the same junk as I did and my only reference was the same

" East of Gulf of Suez " translation !

I had a slightly better decode from Sydney this morning but nothing else worth

a report.

Have you thought about trying a UPS (Uninterruptible Power Supply)? They are pricey, but do filter the A/C as well as provide surge protection and backup power.

Hello David,

Nice to hear you have made progress with your local noise issues. Propagation was not very good last night and there was a lot of static originating in the Gulf of Biscay. I don't know if this has much effect in Scotland though.

I have searched the internet and could not find a data sheet for your filter. However, there are even better filters:

http://www.yunpen-usa.com/index/ye%20series/yet1l2-yet4l2/yet1l2-yet4l2.pdf

The 5A version offers a whopping 84 dB common mode suppression at 500 kHz. However, I can't find a supplier so far!

If you have two filters, you might also try to put them in series.

73,
Roelof, pa0rdt

Hello again,

Thank you all for your encouragement. I, too, hope the improvement lasts. When signals were stronger, and at a more constant level, the effects of the interference were less noticeable. Now could be a good time to try out noise-suppressing techniques.

Robert : I have often looked at a UPS but, as you say, they are pricey. If I can convince myself that it is all down to dirty power, I might be tempted to look again. But it is a huge investment and I need to be absolutely certain that it will cure enough of my problems.

Roelof : that looks like a very useful filter. I will pay more attention to specification sheets, now that the approach looks promising. As it happens, I have two of the present filters. I hadn't thought of putting them in series, but I will try that approach next.

The only concerns I have, now, are how much equipment to isolate from the main supply, and whether individual items can share a filtered supply or whether they each need their own filter. I see a lot of internet research ahead of me.

Thanks for your help,
David gm8xbz

Make sure you check out your UPS for noise - I have found the charging circuit very noisy in several APC and Trip Lite units. I called both trip lite and APC and tried to talk to a tech and could not get past their sales dept reading scripts. Wierd.

Hello All,

At about 2330 UTC, I switched on the shack audio monitors. The atmospheric noise was painful to listen to. Hats off to the YaND decoding engine for sorting out any signals at all!
There was a lot of garbage between those transmissions I would expect to receive at this time of year, but much less corruption of messages than we might have anticipated.

Hello all,

Very short logs both on 490 and 518 kHz, which has been caused by
all night lasting terrific static!

The situation does not look much better as there is an almost
contineous storm reaching from Calais in France to Southern Norway.

Hello All,

A truncated log today. When I looked out at the garden this morning, I saw that my mini-whip pole was mostly horizontal. The lowest joint in my telescopic glass-fibre mast had failed, and the bottom section was split over a length of about 500mm. The rest of the pole was laid out on the grass. Fortunately, it had missed the telephone and antenna wires. {And, before anyone mentions it, I _KNOW_ that antennas should never be erected where they can fall on other wires, but the available plot requires compromises ;-) }.
We had experienced some strong wind gusts overnight, but I hadn't realised just how strong. Strangely, the miniwhip and YaND continued to decode signals from $01A Malin, $01C Portpatrick, $01U Cullercoats, and their 518kHz counterparts, even while the antenna lay in the wet grass.
This is as far as the rest of the log went:

10476. Navtex Log from W Scotland -- antenna mast replacement

Yahoo group: navtexdx (2015)
Date: 2015-07-05 11:42:53 UTC
From: david
Topic: 10476 Message: 10476

Hello All,

The replacement mast is in place. The original mast consisted of the lower six sections of a 10m fishing pole. I had used it for several years before it failed. Back in 2011, I bought a 10m telescoping mast produced by Walter Spieth DK9SQ, but I had never used it. So this was the opportunity.
DK9SQ produced a fibreglass pole that is reinforced along its length and at every joint. Some users reported that the additional coatings (to protect against UV) are RF absorbent, and can modify the radiation pattern of wire antennas. However, I am running the coax for my receive-only miniwhip up the inside of the tube. If anything, RF absorption will be a bonus. Time will tell.
The tube is a little stiffer than the fishing pole, so I have used an additional section, raising the miniwhip to 7m. The outer of the coax is still earthed at the base of the mast, and again as it enters the shack 30m away.

I can't work out whether these poles are still available. The US agent, Kanga, still has reviews of the poles on their site, but the links on the German site would not work this morning. The poles are very well made, although they were more than twice the cost of a common fishing pole of the same length when I was last able to get a price.

I tried some NDB listening, but the static was so bad that morse idents were difficult to confirm. YaND, however, didn't seem to mind on the Navtex frequencies. This is what the new installation heard.

Session Report for David Atkins, GM8XBZ

Hello David,

This is what I found on the Wimo website:

www.wimo.de

>>>
The inventor of the well renowned Fibreglass Telescope Towers, Walter Spieth (DK9SQ) has decided to close his business DK9SQ Funktechnik after more than 30 years of active duty. His well known products (masts, SQ Vertical, SQ Loop) will still be available - we will continue to produce these fine antennas.
<<<

An other vendor is Spiderbeam.
I have a 12m mast for test purposes, which is quite sturdy.

What also can be used is a 2.7 meter length of 7 x 7 cm impregnated garden pole extended by 2.1 meter 4 x4 cm. This one won't bent!

Yes, static is terrific and there is yet an other geomagnetic storm under way!

73,
Roelof Bakker

Roelof,
Thank you for the link. They appear to be a very good price. I will investigate further.

David

10482. Re: [navtexdx] Log 518 kHz, Rotterdam HOL

Yahoo group: navtexdx (2015)
Date: 2015-07-06 17:38:22 UTC
From: Dirk Claessens
Topic: 9427 Message: 10482

Enjoy the vacation, Vincent!
Groetjes - Dirk

The last log for this moment, it's time for a summer holiday.

10486. Navtex log from Antwerp,BEL 20160707

Yahoo group: navtexdx (2015)
Date: 2015-07-07 14:17:46 UTC
From: Dirk Claessens
Topic: 10486 Message: 10486

Hi all,
Log over 1000km.Not too bad, given conditions and the thunderstorms.Bodo coming through was a surprise, although weak & fragmented.Shortest log ever from Porto Santo: :0)
2015-07-07 02:30:29 16> ZCZC PZ94

Topic: 70 Message: 10487

Hello all,

Very poor reception due to a massive thunderstorm over Germany.
Nothing from Italy, but four decodes from Grindavik on 490 kHz!

NAVTEX 490 kHz log over 1000 km:

20150707 2240 518 $03Q 9AS Split,HRV 1318
20150707 2351 518 $01X TFA Grindavik,ISL 2045
20150708 0030 518 $01D OXJ Torshavn,FRO 1327

NAVTEX 518 kHz log over 1000 km:

20150708 0142 490 $01K TFA Grindavik,ISL 2045
20150708 0143 490 $01K TFA Grindavik,ISL 2045

Hello All,

Poor reception further North, too. Since we haven't had any of the good weather we keep seeing reported from other parts of Europe, I had hoped we would miss the static as well. Of course, it doesn't work like that ;-(

10492. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-07-09 10:10:10 UTC
From: david
Topic: 9398 Message: 10492

Hello All,

Once again, 518 is proving to be much harder work than 490kHz. The messages are much clearer on 490, and there are more of them in the raw log. I'm sure it must be a 'local' thing, but can't detect any physical causes, yet.

Hello Roelof,
My log is as short as yours but lo and behold: I found minute traces of Sydney, right after the Split transmission.I have indicated the "pieces of evidence" in red.The 43.661W longitude is also telling.Maybe you should check your log again?

Regards - Dirk

I have made up my mind to try your mini whip antenna in addition to my ALA. However I do not know your e-mail address.
So could you please contact me under dl4ybp@darc.de and tell me if I can buy the mini whip from you, how much you charge for it, where I can send the money to etc.

Thanks and 73
Hans-Jürgen, DL4YBP

Hello All,

At last, the return of some of the Norsemen. Indeed, they seemed to have been trying to catch up, themselves, with extended sessions of transmissions. Region 19 continues its absence, though.

10497. Navtex log from Antwerp,BEL 20150710

Yahoo group: navtexdx (2015)
Date: 2015-07-10 19:45:50 UTC
From: Dirk Claessens
Topic: 10497 Message: 10497

Hello all,
Log over 1000km.Den Helder had a late start, so 1 1/2 message from Haifa could be logged.

Regards - Dirk

10498. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-07-11 10:06:40 UTC
From: roelof@...
Topic: 70 Message: 10498

Hello all,

Making log reports is an easy job these days.
There was no static to speak of last night, however just an other
geomagnetic storm reared its ugly head!

NAVTEX 490 kHz log over 1000 km:

20150710 2250 518 $03R ICH La Maddalena,SA,ITA 1228
20150710 2320 518 $03U IQM Mondolfo,ITA 1114
20150710 2351 518 $01X TFA Grindavik,ISL 2045
20150711 0030 518 $01D OXJ Torshavn,FRO 1327

NAVTEX 518 kHz log over 1000 km:

20150710 2210 490 $03N IGS Piombino,ITA 1087
20150710 2248 490 $03R SVL Limnos,GRC 2147
20150711 0146 490 $01K TFA Grindavik,ISL 2045
20150711 0202 490 $03M EAV Cabo de la Nao,ESP 1497

Best regards,
Roelof
==========

10499. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-07-11 10:10:22 UTC
From: david
Topic: 9398 Message: 10499

Hello All,

The logs start a little later than intended. I forgot that I had left a Sealed Lead Acid Battery on charge. That charger doesn't have any noise peaks at Navtex frequencies, but it raises the noise floor enough to disrupt reception of weaker signals. It was late evening before I realised. I have written myself a strongly worded note for the future ;-)

Session Report for David Atkins, GM8XBZ

Hello Luke,
This is $04F USCG Boston.
On HF, most USCG stations relay messages originating from all over the world.The geographical hints they contain can therefore be very confusing!
Regards - Dirk

Hi Roelof,

Yes, that does seem a short log compared with your usual ones. Conditions last night weren't as bad as they have been lately. $01D Torshavn, for example was very loud and clear for me (and only 700km distant) and you always seem to hear them when I do. Did you receive your 'locals' as normal? I have found it easy to inadvertently re-tune Studio 1. The Rx control panel continued to show the intended frequency, but the 'Aux ' panel showed that I had touched something and scrolled the receive frequency off enough to disrupt reception.
Whatever has caused you a problem, I hope you find it soon.

Best Wishes
David gm8xbz

Hi Roelof,
Yes, I have noticed it too the last week or so....Normally, your logs are considerably longer than mine.
The last week it is the opposite situation!
Look at the differences below for 6/7 July.Receiver gone deaf from the thunderstorms??
Hope you can locate the problem.
Regards - Dirk

Just a short log showing Malta coming in nicely. Then Studio 1 and Perseus froze and reception was interrupted.

Hello all,

Well, there certainlty is something wrong here.
It appears that the Afedri has developed an internal spur exactly on 518 kHz. This spur has gradually increased in strength and right now it is producing a SNR of 70, overriding all but the stronger stations.

It is not coming from the antenna as it does not show on my PERSEUS. Reducing the IF and RF gain on the Afedri did not help. I inadvertedly left the reduced gain setting on and as a result only Grindavik made it on 490 kHz!

Instead of the Afedri, I used my PERSEUS for 518 kHz and things are more or less back to normal, including Bodo, Vardo and two excellent decodes from Sydney!

Hello Roelof,
Well, I'm pleased that you managed to find the fault, even though it is sad that the Afedri seems to be having problems. Does the problem still exist if you use the USB connection?
As you know, I have had issues with my Afedri under Studio 1, to the extent that I have put it to one side while I sort out other issues. If you need to borrow another Afedri to test your installation, let me know and I will send it to you.

Best Wishes,
David gm8xbz

Hello All,

Improved conditions out here in the NorthWest corner, too, with Vardo and Sydney making the log for the first time in many weeks.
I had some strange scraps of messages around 2220. After Hans' report, I'll take another look for Malta. There would never be enough to claim a received signal, but I enjoy the detective work ;-)

Topic: 70 Message: 10517

Hello all,

The problem appeared to be an operator fault and is best described as a senior moment.

I use one mini-whip for all my receivers here. My main antenna entry is in a cupboard in the living room where power supplies, power feed units. antenna tuners and a net-book reside.

The output of the mini-whip PFU is fed into a Norton Amplifier and then into a four port splitter. From the four port splitter, one cable is going through the cupboard to a cupboard on the second floor and then to my work shop. A second cable goes to a PERSEUS that runs as server with the net-book on the internet and a third cable is routed to my listening post in the dining room. Here I have a two port splitter, which feeds a second PERSEUS and the Afedri SDR.

The problem was that after testing a new antenna, the cables on the two port splitter were reversed, which meant that the signal to the Afedri suffered an extra 20 dB loss!

For some reason, the Afedri has a minor spike on 518 kHz, which produces a SNR of 1. In practice, this is no problem. However, with the extra 20 dB attenuation in line, the band noise dropped also 20 dB and the spur was 20 dB stronger than before in regard to noise and signals. This desensitized the receiver and was the reason of the poor reception of the last few days.

At first, I feared that my Afedri was at fault as whilst testing an automatic antenna tuner for my hf doublet, I had sent 2 W rf up the cable to the afore mentioned four port splitter. This splitter has a port to port isolation of 30 dB, so of the 2 W only 2 mW remained, which should not do much harm.

As an aside, the input of the Afedri is very well protected for overload. There is a gas arrester at the antenna socket and also external back to back zener diode protection at the input of the VGA.

I still don't know what causes the small spike on 518 kHz. The weird thing is that it is absent when using SDRConsole or Linrad to drive the Afedri.

In my search for the cause, the Studio 1 installation crashed and would not recognise the Afedri any more. All in all it took the better part of the afternoon to sort it all out.

73,
Roelof Bakker

Again quite a number of messages from Malta and also from Kerkyra, which is heard more often here than Malta.

Nice to see Roelof that you managed your problems. Sometimes things can be tricky.

I am quite envious when I see the T/A logs at this time of the year.

Hello all,

The equipment is back to normal, however conditions are not.
The Kyoto Dst dropped to -60 yesterday and is still -30 at the moment.
I also found that Canadian NDB's below 300 kHz still made it, but none above 300 kHz.
This is a bad sign for NAVTEX on 490 and 518 kHz!

NAVTEX 490 kHz log over 1000 km:

Hello All,

Back to the mundane signals, again.
No chance of finding Malta until Portpatrick breaks down. Portpatrick is a very strong signal, and they always fill their time slot.

Roelof, I'm pleased you have found the cause of your difficulties. Even better to know that the equipment is all working as expected. Your logs always inspire me to do better, and I keep trying new ideas. I even speak encouragingly to a hawthorn bush, but it refuses to climb beyond 1500mm and I have to stick with the telescopic pole.

With the ALA in this direction I can hear almost all Scandinavian stations with strong signals. And of course Pinneberg comes in very strong. The British stations are a bit weaker. It is amazing that I still received Malta with so many messages. Generally it is unusual that I could receive Malta so many times recently.

```

```
20150715 0224 518 $01O GPK Portpatrick,SCT 707
20150715 0225 518 $01O GPK Portpatrick,SCT 707
20150715 0226 518 $01O GPK Portpatrick,SCT 707
20150715 0226 518 $03O 9HD Malta,MLT 1976
20150715 0227 518 $03O 9HD Malta,MLT 1976
20150715 0228 518 $03O 9HD Malta,MLT 1976
20150715 0229 518 $03O 9HD Malta,MLT 1976
```

They run seamless into each other and it is clear that Portpatrick overruns Malta. Lately Malta is using its full time slot. The number of stations received depends on the number of messages from Portpatrick and propagation of course.

73,
Roelof, pa0rdt

10525. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-07-15 10:37:55 UTC
From: david
Topic: 9398 Message: 10525

Hello All,

No T/A, but it was encouraging to see both $02P Madeira and $02I Las Palmas on 518, as well as $02A Las Palmas on 490. The 'A' Index was all over the place, yesterday. It doesn't seem to be a very reliable indicator of propagation to come.

I noted Roelof's comments on Portpatrick. They seem to fill their allocated slot every time, as well as sending weather reports from shore stations at other times. They completely smother any other transmissions for me. Malin Head has also gone back to starting their transmissions about 90 seconds before their scheduled time. Now that Split (who used to have signals that clashed with Malin) has sorted out their transmitting chain, there seems no excuse for this early start. It wipes out choicer DX for me ;-((but it is just a fact of life, I guess.

10526. TECH: filter

Yahoo group: navtexdx (2015)
Date: 2015-07-15 13:01:57 UTC
From: roelof@...
Topic: 10526 Message: 10526
Attachments: 1 described; binary payloads are missing from this source WARC

Hello all,

To have an alternative for my Afedri SDR for NAVTEX reception, I have started work on a two channel (490 / 518 kHz) analogue design. My aim is to use low power consumption, yet achieve good performance.

As a start, I have build an input rf filter. It has been designed with the well known Elsie filter design tool and is using standard leaded RFC's (the fat resistor type) and SMD NPO capacitors.

The -3 dB bandwidth is 65 kHz centred around 500 kHz; filter loss is 3 dB, which is no problem for my application.
Rather than presenting the filter graph, it is interesting to see what it actually does with real signals.

I have attached a Linrad screenshot. The lower half is with filter, the upper half without!

73,
Roelof Bakker

Hi Roelof,

Thank you for the update. I look forward to further information as the project progresses.

I'm also looking forward to your ideas on the use of Linrad for NDB's and Navtex. Like many others, I have been discouraged by the stark interface. I am hoping that your greater experience with monitoring these signals will enable you to find and describe a basic set-up that others can use as a starting point.

Regards
David gm8xbz

10529. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-07-16 07:26:15 UTC
From: dl4ybp@...
Topic: 7241 Message: 10529

Good morning all.

La Maddalena with many messages, as usual. Bodo and Vardo after a longer time again.
Malta this time only with a few clear messages, but several more garbled.

73
Hans, DL4YBP

Hello all,

Propagation is much improved.
Dirk, it is amazing to find VCO, Sydney, CAN, flagged correct by
YaND, considering the state of the decoded message!

Not really thrilling propagation. And quite some static. And slight thunder at the moment (04:42 UTC)
Nice omnidirectional reception with he mini whip. A lot of Scandinavians and Varna e.g. at the same time.
The EK071 reacts more strongly on static than the Perseus. This is, I think, the reason why YaND did not recongnize Mondolfo and Varna.

From: david
Topic: 9398 Message: 10536

Hello All,

On a night when I had difficulty reading messages from Dover and Hamburg at under 700km, I was astonished to see four clean decodes from $04J Sydney. Sydney is a very rare visitor to my log at any time. There is no accounting for RF propagation.

Hello All,

Nothing exotic! It was nice to see Las Palmas for the first time in a while.
Local gales meant the local stations were on the air a lot more, squashing
what little DX there might have been.

Hello All,
Only logs from 518kHz today.
When I looked at the logs from both instances of YaND this morning, I discovered that there were no entries for 490kHz. Closer inspection revealed the reason. The 490kHz instance is set to 'Autotune', and it was sitting way outside the audio passband from the receiver. I can only assume one of my occasional interfering signals had tracked across the passband -- I have been in front of the screen when that happened -- and taken the demodulator with it. When it got to the high end of the scale, there was nothing to bring the demodulator back ;-((

Couple of questions, then:
Is there any reason for me to leave YaND set to 'Autotune'? My receivers are stable. Are the transmitters close enough in frequency to each other for YaND to cope without retuning itself?
Have I missed a setting that will pull YaND back to a central tuning position without me telling it to go there?

Hello Hans,
I guess you are using an outdated station database.Yand will only come up with San Juan if 'AMZ' was defined as a unique keyword.This may have been the case long ago, but not anymore now.'AMZ' is simply to short to be unique, at least 4..6 characters are needed.You can upload the most recent version in the files section of the group.
Regards - Dirk

Hi David,
-With autotuning set to on, Yand will never track outside of the dark blue region (+/- 250 Hz of the central frequency). (but wandering interference peaks will be tracked within that range of course!)
-Yand will remember the last used central frequency and set that frequency at the next startup.- The "central tuning frequency" you are referring to (1200Hz) , is a default value, and will only be used by Yand when it cannot find the yand.ini file. I'm suspecting this must have been the case??- With stable receivers, autotuning can safely be disabled. European navtex transmitters are all in a band of +/- 35 Hz, nothing to worry about.
Regards - Dirk

Hi Dirk,

Thank you for the helpful response.
I didn't phrase my description very well. I have my decoding centre set at 1300 Hz, and that was what I should have written. But what could have moved the dark blue region? Is there a way YaND could move it, or have I accidentally clicked a mouse? To minimise noise, I usually have the monitors turned off, and it is possible that I have moved the tuning band without knowing. I was so sure I had not, that I suspected an automatic process. However, I am quite capable of throwing my sabot into the process.

Best Wishes
David

Hi David,

I don't use auto tune. YaDD is set for each particular rx's audio output frequency as I am only interested in coast stations. Auto would be useful for capturing some ships as some seem to be off frequency. Also there is some time lag in auto even if YaDD is close and a tx could be lost.

Thanks Don,

I'm doing Navtex, and they are ONLY shore stations so I'll turn the Autotuning off.

Regards,
David

Hi David,
Yes, an accidental mouseclick is the most likely reason.I can't think of anything else.
Regards - Dirk

Is there a way YaND could move it, or have I
accidentally clicked a mouse?

10550. Hallo Dirk: Station database

Yahoo group: navtexdx (2015)
Date: 2015-07-20 07:35:22 UTC
From: dl4ybp@...
Topic: 10550 Message: 10550

Quite a funny reception that I reported. ;-) this is what I meant. The station database is new, but I guess that I included 'AMZ' as a unique keyword myself. I use YaND in two versions. One when I listen from at home. This station database included 'AMZ'. The other version of YaND is for listening with remote Perseus from overseas. And in this version 'AMZ' is omitted. So I guess it is me who did it.

Thanks for your attention and 73

Hans, DL4YBP

Hello all,

A ferocious thunderstorm over Slovakia, east Poland and Belarus with a very high strike rate, blocked weak signal reception here. Maybe David in Scotland suffered less, bit it was truly dreadful here. Only after 02:30 UTC the problem faded out when eastern propagation dropped.

To demonstrate the impact of this kind of static, I have uploaded two files on my web-space:

http://ndb0.home.xs4all.nl/NAVTEX/

The first one shows the situation at daytime on my Linrad waterfall display. Note the trace of NDB CHT-276 on the secondary window waterfall.

The second file shows the situation yesterday evening at 23:03 UTC. Note that CHT-276 is not visible at all in the secondary window.

Hello Roelof,

That is certainly a clear demonstration of the impact of static!
I was lucky that I had nothing like that much trouble. At last, I find an advantage in living out on the fringes ;-)

Best Wishes
David gm8xbz

Hello All,

I found an old 'Mouse House', a small plastic holder that the computer mouse can hang in, and it is now out of harm's way to avoid any further accidental changes to YaND.

I had two strokes of good fortune. Not only did I escape the worst of the static, but $01Q Malin Head started their 2240 transmission (very) early, and finished in time for me to log $03Q Split. Then, at 0240, Malin did not transmit over them, and I was able to log Split again. As a final bonus, I had good signals from $03P Haifa for a new entry in the log.

For this time of year, I had quite a good listening session. When I see the problems with static over mainland Europe, I am almost embarrassed to post the log.

Hello Maurizio,
Nice to hear from you again!If I recall correctly you were the first Italian Navtex DXer to log Canadian T/A.
We are at solar minimum now and propagation conditions have been horrible the last months.Anyway, enjoy your stay in Sardinia and good DX!
Regards - Dirk

Hello David,
Yes Haifa...
Until about 2 years ago Haifa was quite easy to catch, I logged it almost dail the year round.
The reason was that it sat all alone in its timeslot, so no interference from the locals.
But then the IHO navtex board has asked all stations to shift their transmission schedule to the "right" time slot.So A-stations should transmit in the 00:00/04:00/08:00 slot, B-stations in the 00:10/04:10/ slot and so on.(as explained in all navtex manuals, but the real situation was quite different then, for historical and other reasons)
So Haifa had to shift to the P-slot...
Regards - Dirk

As a final bonus, Ihad good signals from $03P Haifa for a new entry in the log.

20150719 2228 518 $03P 4XO Haifa,ISR 4042

Hi all,

Much better conditions last night. Can't remember when I last received Ismailia. And then even with more than one message.

Hello all,

Poor reception on 518 kHz as Murphy strikes back once more.
For a week, I have been noticing a small and weak band of local noise, just below the 518 kHz NAVTEX channel.

It appeared to be spot on last night and as it raised the noise floor by 8 dB, weak signal reception suffered.

The source is not in my house, it seems. Disconnecting my second mini-whip cable between the patch panel where the feed line enters the house and my operating position, it goes away. Weird, as powering this second mini-whip or not does not make a difference at all.

As the cable and mast of the second mini-whip is only used for testing, disconnecting the cable is no problem.

I just had good reception from OXJ Tórshavn, FRO, 1327 km.
It is only 4 dB above the band noise at daytime, measured with the Linrad averaging S-meter.

NAVTEX 490 kHz over 1000 km:

```

Hello all,
Good propagation from the north, Bodo and Vardo are back.The illegal Turkish station on or around Cyprus has done it again, using Samsun's E-identifier, and Samsun's time slot.

Regards - Dirk

10564. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-07-22 08:07:56 UTC
From: dl4ybp@...
Topic: 7241 Message: 10564

Hallo all,

I have made some antenna comparisons last night . As my old notebook is too weak for YaND I used TrueTTY.
Here some examples of good receptions on 518 kHz from its raw log at my QTH.

After the last log Studio 1 and Perseus froze again and reception stopped. Bad luck in the promising night.

From: david
Topic: 9398 Message: 10566

Hello All,

Once again, Malin Head's early start [and finish] gave me the opportunity to log $03Q Split. Last night, I got a lot of the static that had plagued others in previous days. Hopefully, it has moved away from all of us for a while.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

From: david
Topic: 10571 Message: 10571

Hello again,

As part of my sparse overnight log, I found the following message. It is much too garbled to ever form part of a report, but I am curious about it, yet cannot extract any clues. Can anyone help me identify it? It was late enough in the time-slot to have come from anywhere.

```
2015-07-23 03:34:45> ZCZC7GE20

From: Dirk Claessens
Topic: 10573 Message: 10573

Hello all,
Quseir was a surprise; very weak and only barely recognizable. Previous log was quite some time ago: 2nd April '15.
Regards - Dirk

From: david
Topic: 10571 Message: 10574

Hello Roelof,

Yes, I foolishly forgot to include the frequency. It WAS 490kHz.
Thank you for identifying the signal. I missed an awful lot of the transmission. I think that my YaND missed a lot of the CR/LF combinations, especially in the lists of data.
I enjoy puzzles, but this one was beyond me to solve. Even with your copy in my hand, it is hard to spot which characters I received correctly.

Perhaps I will do better in the following 24hrs

Best Wishes
David

Hello All,

Re-wiring the shack, so the overnight logs were made without the mains filters. I could see the difference in the waterfalls, but the uncertainty of propagation meant there was not much difference in the end.

I see the 'A' index has taken another turn for the worse, which suggests another bout of short logs ;-(

10578. ARM sdr receiver for navtex reception?

Yahoo group: navtexdx (2015)
Date: 2015-07-25 06:38:03 UTC
From: on2ron@...
Topic: 10578 Message: 10578

Hi all,

I just discovered that Alberto, I2PHD has build a sdr receiver for reception between 8 to 900 kHz with a cheap ARM development board. Maybe this could serve as a usable fixed Navtex receiver.

ARM Radio, an SDR implemented on an ARM chip http://armradio.weaksignals.com/

10579. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-07-25 12:28:26 UTC
From: david
Topic: 9398 Message: 10579

Hello All,

Re-wiring is completed. There are now four 20A mains filters bringing the power into the shack, which has power sockets everywhere on separate circuits so that I can take some sections off line for modifications, whilst keeping other items working. A lot of the interference has gone, although there is still work to do on some of the LCD monitors which produce huge spurs. Even so, a great improvement in my receive environment.

Not that it was a lot of use last night. Band noise was high, anyway. But I was also monitoring NDBs for this month's Listening Event, and found that here was a big gap in my receiver map. Aiming South East, I could hear out to about 400km, then almost nothing until I got to around 1500km. Further than that, reception picked up again. However, by 0100z I was unable the hear stations I had listened to at 1500. Of course, Navtex transmitters are designed for greater range than NDBs, but there was still a noticeable fall in the number of stations in the YaND log.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On July 25, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

From: dl4ybp@...
Topic: 10584 Message: 10584

Hi all,

A look at 490 kHz this time during a stromy night in which one of my ham radio wires were torn down.

73
Hans, DL4YBP

QTH : Luebbecke, Northwest Germany
Receiver : Perseus
Antenna : ALA 1530 SSB+ Westsouthwest -- Eastnortheast (30degs)
Soundcard : Behringer U-Phoria UM2
Software : YaND 6.4

In this configuration the ALA receives nicely in the stated directions (main lobe) but misses some stations received with the omnidirectional mini whip.

Hi All,

I have replaced the transformer that matches the LongWire to the 75 ohm coax

and the antenna now "sees" about 10K.

This was my first log on 490 for some weeks :- (lower frequences ignored)

20150725 1940 490 $03W ICI Sellia Marina,ITA 1910

20150725 2029 490 $03D TAL Antalya,TUR 2966

20150725 2230 490 $03P SVK Kerkyra,GRC 2031

20150725 2236 490 $03Q SVH Irakleion,GRC 2751

20150725 2251 490 $03R SVL Limnos,GRC 2402

20150725 2312 490 $02T EAC Tarifa,ESP 1651

20150726 0104 490 $02G CTV Monsanto,POR 1498

20150726 0141 490 $01K TFA Grindavik,ISL 1951

20150726 0203 490 $03M EAV Cabo de la Nao,ESP 1356

20150726 0400 490 $02A EAL Las Palmas,CNR 2693

LongWire antenna into PALSTAR receiver

Unfortunately, my laptop, which I was going to use to enable

me to do a 490/518 log, has now lost its CMOS battery and will

not boot every time. This will be difficult to replace, so I

need to have further thoughts !

Cheers

Bob

Hello All,

Well, this is a first, for me.
Reception on 490kHz was disrupted by a radio amateur sending CQ.
The Island of Bute is only 200m across the water directly in front of my house. This weekend is apparently an IOTA contest, and someone had decided to 'activate' Bute on LF. His transmission was probably clean enough for regulations, but sensitive receive chains can get right down into the spurs. (Sadly, in this case}. There was a lot of garbling in the Navtex messages, as a result. As Murphy would have pointed out, a lot of the garbled bits were the ones with Station Identifiers.

I rescued these few:

Hello All,

The log from 490kHz was so much poorer than 518kHz, I suspect some form of (additional) local interference.

Session Report for David Atkins, GM8XBZ

10599. A Question about Local Stations

Yahoo group: navtexdx (2015)
Date: 2015-07-29 09:52:36 UTC
From: david
Topic: 10599 Message: 10599

Hello All,

By convention, we only report logs over 1000km. I have no issues with this. However, there are some stations that don't get reported because they are within the cut-off range of all of us. Is there a case for reporting _ALL_ stations occasionally, in order to ensure that the main database (presumably REU / RNA) continues to reflect the Navtex world as it really is?

For example, $01W Valentia is shown as last logged on 22 May, suggesting it might be off-air or difficult to detect, although I hear the station several times a day. $01L Hamburg (Pinneberg) is shown as last logged even earlier.

I don't want to make the Logs Editors' jobs difficult, nor do I want to clutter the list with information we find superfluous. But I also would hate to think that others would be put off by concluding that a station that might be interesting DX for them was undetectable.

And, I use REU as a data resource and would like to ensure it is up to date ;-)

What do you think?

Best Wishes,
David gm8xbz

From: Dirk Claessens
Topic: 10599 Message: 10601

Hi David,
No problem with that at all. It completes the picture.
A full daytime log can also be interesting at times.Regards - Dirk

Is there a case for reporting _ALL_
stations occasionally, in order to ensure that the main database (presumably
REU / RNA) continues to reflect the Navtex world as it really is?

10602. A more accurate "SNR" for YaND?

Yahoo group: navtexdx (2015)
Date: 2015-07-29 14:47:29 UTC
From: Dirk Claessens
Topic: 10602 Message: 10602

Hello all,
The "SNR" gauge at the top of Yand's main screen was meant to be a general indicator of the "decodability" of a signal.It is of course not the true signal to noise ratio. It is not possible to measure/calculate the SNR of a signal without going through a calibration procedure, and knowledge of receiver settings (IF/audio bandwidth,etc..) is needed. Details Yand cannot know.
So in recent versions of Yand, a next best method was implemented:The standard deviation (sigma) of a pure sine wave is known: sigma = 2 * Squareroot(2) = 2.83A strong Navtex signal is a (almost) pure sine wave. A medium strength sine wave is a mixture of a pure sine wave and random noise, and will have a higher sigma. And pure noise will have a still higher sigma, according to literature and some experiments the sigma of pure antenna+receiver noise was found to be in the range of ~6..8.So with some fudge/scaling factors, it was possible to calculate a "SNR" value that yielded ~zero for pure noise, and ~90..95 for my local flame throwers Den Helder and Ostend.This worked perfectly, but the scaling was determined specifically for my Perseus with IF-bandwidth set to 450 Hz.Onn the Lowe HF225 however, with its 2.2KHz IF bandwidth, SNR values were typically far too low: 50..60 for strong locals, and barely above zero for medium strength signals. In hindsight, it was the 6..8 variation of the sigma for noise that was the problem: the wider the IF bandwidth, the more noise will be present and vice versa. And what noise? white/pink/brown noise?

By coincidence - while searching for something else :0) - I found an article on the internet about the crest factor of waveforms.The crest factor of a waveform is defined as the ratio of its peak value to its RMS value: CF = Vpeak/Vrms.
For acoustics and audio engineering applications, the CF is usually expressed in dB: CF = 20 log(Vpeak/Vrms)
For a pure sine wave, Vpeak/Vrms = SquareRoot(2) = 1.414 or 3.01 dB.For "ambient noise", literature mentions values of ~9..10 dB.
A quick test revealed that the CF for signals from Den Helder/Ostend was very near to 3 dB (on both the Perseus and the Lowe)
For noise, stable values of 9.3..9.4 were found, again on both the Perseus and the Lowe!
Scaling the 3..9.3 dB range to 0..100 can now be done in a straightforward way, without "fudge" factors.This works!

Below are some examples.
- Mondolfo is coming out of the noise, then dives under in it (because of "sunset effects", note the time) CF

Hi Dirk,

Very interesting reading. Yet another step forward in the journey towards YuND {Your ultimate Navtex Decoder).

Does this mean that there will be a new release of YaND? If there is to be one, can you consider including a switch that can suppress the only Tooltip -- the note in the Log screen to shift-click on the left-hand column to add to the Report? I understand why it is there, but I curse it every day. When I am going through my log trying to decipher a garbled message, I tend to move the mouse where I am reading. And that is _exactly_ where the hint pops up. I would gladly pay for the key that suppresses it ;-)

But, well done in your researches into a measure of decodability. And thank you for explaining it.

Best Wishes
David

Hi David,
I will remove the tooltip.It dates back to the time when no user manual was available for Yand.Users kept struggling with the problem of "how the F%^&* do I make a report!?"
Regards - Dirk

can you consider including a switch that can suppress the only Tooltip
-- the note in the Log screen to shift-click on the left-hand column to add
to the Report?

Hello all,

Though Summer Solstice is just five weeks ago, propagation is already changing for the better.

Lately, Bodo has been found in the 00:20 UTC timeslot instead of the usual 00:10 UTC slot. Last night Vardo appeared in the 00:10 slot. I wonder if they have switched.

NAVTEX 490 kHz log over 1000 km:

10608. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-07-30 10:18:04 UTC
From: david
Topic: 9398 Message: 10608

Hello All,

Greatly improved propagation, especially to the North, where stations that have been rare for some time delivered several messages.
The Faroese stations $01L and $01D are too close to me for normal reporting. However, instead of just a few messages from them I received a large number. Will this last?

On the subject of reporting 'local' stations, I will try to do a full 24hr reception report on the 1st of each month {One log for each station in each timeslot}. I hope that other reporters will be able to make a regular "full" report, and that I am not the only one who finds it useful.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On July 30, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

10609. Correcting an automatic identity

Yahoo group: navtexdx (2015)
Date: 2015-07-30 10:43:49 UTC
From: david
Topic: 10609 Message: 10609
Attachments: 1 described; binary payloads are missing from this source WARC

Hello All,

I have touched on this area before, but this is a specific example of my query.

YaND makes a really good job of identifying signals, often surprising me with its insights. But sometimes things go wrong. This screenshot shows the start of a particular problem.

Last night I received the indicated signal at 2353. Although the header is plainly "ZCZC XB27" and the text starts " REYKJAVIC VIA GRINDAVIK", YaND had identified the B1 character as a "P" and declared the signal to be from Den Helder.
I don't have any complaints about that. I have made bigger mistakes. But my query lies in what happens next. I can change the B1 character to an "X", which YaND allows, UNTIL I click away from that line when YaND changes the B1 character back to "P" and insists on Den Helder.

As it happens, I didn't need the entry to go into my Report because there were other Grindavik logs in that Timeslot. In the past, when I wanted to post a reception report in similar circumstances, I have changed an UNID entry to have the Grindavik characteristics and altered the time on the report page. Dirty, but it works. Of course, the database has to be edited later if it is to be queried in some way.

But I wonder why I can modify the Navarea numbers and affect the selected station, and change an UNID entry to anything I want, but not modify a decision made by the program even when I point excitedly and shout at it.

Perhaps there is some other key I should be pressing? The situation only happens very rarely, and isn't the end of the world. But it is a loose end in my patchy knowledge that I would like to tie up.

Best Wishes
David GM8XBZ

10612. Re: [navtexdx] Correcting an automatic identity [1 Attachment]

Yahoo group: navtexdx (2015)
Date: 2015-07-30 14:45:10 UTC
From: Dirk Claessens
Topic: 10609 Message: 10612

Hi David,
Last night I noticed that Den Helder and some UK stations have been issuing many off-schedule gale warnings.
I'm guessing that the Reykjavik message was interrupted by Den Helder.(Unsure about your QTH, but here Den Helder will blow away everything, including Ostend)
Yand scans a message first for unique identifiers.
If none are found then it scans for geographical keywords in combination with the ID-letter as it was received.I'm guessing NETHERLANDS COASTGUARD is present in the message at the end.I cannot change that behaviour, unique identifiers have precedence over geographical keywords.

Regards - Dirk

I can change the B1 character to an "X",
which YaND allows, UNTIL I click away from that line when YaND changes the B1 character back to "P" and insists on Den Helder.

2015-07-30 03:53:59 19> NNNN

This was after going back to the TARGET HF3 receiver and changing

to USB instead of the usual LSB. I don't think that made the better

decoding but there seems to be fewer "odd peaks " in the Spectrum

" baseline " with no signal using USB.

I think that possiblly the digital generation of the local oscilator

frequency produces a lot of radiation into the rest of the system.

Anyone got a clue about ths sort of thing !

Hopefully,Roelof, your analogue receivers will avoid this !

Kind Regards

Bob

The short text lines are due to my fiddling with the UoS box !

Hi David,

Last night I noticed that Den Helder and some UK stations have been issuing many off-schedule gale warnings.

I'm guessing that the Reykjavik message was interrupted by Den Helder. (Unsure about your QTH, but here Den Helder will blow away everything, including Ostend)

Yand scans a message first for unique identifiers.

If none are found then it scans for geographical keywords in combination with the ID-letter as it was received.
I'm guessing NETHERLANDS COASTGUARD is present in the message at the end.
I cannot change that behaviour, unique identifiers have precedence over geographical keywords.

Regards - Dirk

++++++++++

Hi Dirk,
Of course, you turned out to be right. The full message went off the bottom of my Log screen but, when I came to look at it the cause was clear. Thanks for explaining how the program makes its choices.
I suppose Yand simply wouldn't believe its own decode of the B1 character. Not surprising, as it is just one unit and easily corrupted. But I was surprised that I couldn't force the change. I guess it is back to dbManager.exe for me.

Best Wishes.
David

Hello Bob,

When you listen to the receiver noise in either upper or lower sideband mode, you will notice that these sound different.

The reason may be that the carrier insertion oscillator is not 100% correct positioned and hence the audio recovery is coloured by this.

In professional receivers, the carrier insertion oscillator is fixed and USB and LSB have its own dedicated filter. Unless these filters are exactly the same, the same effect will be noticed.
I just checked it on my EKD500, which has two filters for either sideband on SSB and they do sound different.

For digital modes and this also applies to RTTY, it is important that the time delay over the filter bandwidth is the same.
For cheap filters and also for narrow CW filters, this is not the case.

So far, I have spent quite some time in researching how to build linear phase crystal filters for my analogue NAVTEX receiver. It can be done, but is not for the faint-hearted.

So yes, there might be a difference between USB and LSB on NAVTEX.

As phase shifts occur most near the filter edges, I have changed the bandwidth of the CW filters of Studio 1 from 500 to 750 Hz.

Best regards,
Roelof Bakker

Hi Roelof,
You were very lucky!Almost all messages from Malta have MALTARADIO in the first line, which is unique and would have caused Yand to assign the message to Malta...What the situation below does illustrate however, is that the counting of keywords for each candidate station works.For O3/Malta only 1 keyword is present: MALTAFor O4/VON 5 were found: ST FRANCIS (twice) , GRAND BANKS (twice) and FUNK.
In this situation, there is no need for Yand to change the ID-letter in the B1 column, as the O is already present as received.For David's X-message from Reykjavik mixed up with P/Den Helder, Yand must override the X in the B1 column with P to make it coherent with the ID decision.
Regards - Dirk

Hello Dirk,

Here is anexcellent example in which YaND made the right decision:

Hello David,
Except for strong locals, I have developed the habit over the years of always to scroll down to the end of the message.You never know what's "dangling behind at the end".Roelof's Malta/St.John's mix-up is a prime example.
Regards - Dirk

Hi Dirk,
Of course, you turned out to be right. The full message went off the bottom of my Log screen but, when I came to look at it the cause was clear.

Hello All,

Firstly, I apologise for the impression in yesterday's log that $01L Rogaland had been ceded to the Faroes. Fortunately, the Norwegians are a tolerant nation, and a diplomatic incident was avoided. I'll type more carefully in future.

Propagation remains as we might expect for summer at the wrong part of a solar cycle. Northern stations still seem easier to log than usual -- stations to the East somewhat harder.

Hi Roelof,
Time will tell...But I just noticed my sentence was incomplete, it should have been:But the general trend is down; with a little bit of luck SSN may be back to 2011/2012 levels in spring 2016.
That is, IF the SILSO prediction is correct.Anyway, as was said here so often: it can only get better!
Regards - Dirk

10626. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-08-01 09:20:15 UTC
From: david
Topic: 9398 Message: 10626

Hello All,

My Navtex receiver is an Elad FDM S2. Because the current software (SW2 ver 1.100) has an issue with where it produces audio from the second receiver, I still have to use my copy of Studio 1 solely for Navtex. The Studio 1 waterfall for each receive channel's audio stretches +/- 1.2kHz.
Which is all an introduction to my 'Middle Distance Propagation Indicator'. When propagation favours medium distance communications for me, I can see the upper ID of the NDB ILM- 488kHz on my waterfall [at about 489.02kHz]. It was in full view last night, and there was a full complement of signals in the range 1000 - 2500 km. With the stormy weather, it was quite a surprise. Sadly, the enhancement does not often stretch much further.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Aug 01, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

From: david
Topic: 9398 Message: 10632

Hello All,

As threatened, here is a log of a full 24hr receiving cycle. I have included a report of the first transmission received from each station in each timeslot. Excluded are the impromptu Gale Warnings. UK stations have the habit of broadcasting 'Weather Reports from Coastal Stations' [mostly MoD airfields] at irregular intervals. They have been excluded too.
Malin Head continues to start its transmissions about 90 seconds early. I'm sure there is still a reason for that, even though Split has a well regulated signal, now.

Overall, reception was better than I might have expected. $03Q Irakleion and $04J Sydney appeared for a rare visit to the log, and $03L Constanta was logged for the first time.

The 24 hour study revealed some real holes in my receiving day.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Aug 2, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

From: bob.blodge@...
Topic: 10611 Message: 10633

Good Afternoon, Roelof,

Many thanks for your reply about my odd problem.

I am sorry for the delay in replying but things have been a bit hectic here

due to a few non technical troubles !

I have come to the conclusion that this is not a receiver problem but is due

to a curious " outside interference "

It is there for most of the day but will suddenly disappear completely leaving

a nice clean " baseline ". I have tried to create this odd " peeaky " effect

with a signals from my 2 signal generators, but without success.

It is strange that it does not always ruin the decoding, even of weak signals.

When I have a few spare moments, I intend to re-install my Active Antenna

and see if this does any better, but in the meantime I will try to identify the

source of the problem !

Kind Regards

Bob

Topic: 9398 Message: 10636

Hello All,

Back to the 1000km plus logs.
As Dirk suggested, conditions seem slightly improved. I saw $03I Izmir for the first time, as well as getting a last-minute visit from $04X Labrador. Northern stations continue to give good signals.

From: david
Topic: 9398 Message: 10638

Hello All,

Propagation seemed to be just good enough to allow the rarely heard to interfere with the seldom heard, leaving me with a lot of jumbled messages that were not quite clear enough to log. Strong gales kept the antennas moving about a lot, and gave rise to lots of additional messages from local stations. Those messages also swamped the DX. I was pleased to be able to decode these :-

10640. Navtex log from Antwerp,BEL 20150804

Yahoo group: navtexdx (2015)
Date: 2015-08-04 18:09:25 UTC
From: Dirk Claessens
Topic: 10640 Message: 10640

Hi all,
Daily log over 1000 km.
Roelof: look what happened to the Valencia message below, around the time you logged Labrador.I will use the loop tonight, with the null pointing south.
Regards - Dirk

10643. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-08-05 11:59:26 UTC
From: roelof@...
Topic: 70 Message: 10643

Hello Dirk,

Yes, co-channel interference can produce amazing results!

On an other note, T/A propagation was truly excellent on the night from Monday to Tuesday and Canadian NDB's were booming in right through the heavy static. Without static, we might have seen much more Canadian NAVTEX decodes.

The upcoming night I will run two instances of YaND on 518 kHz. One with Mini-Whip and PERSEUS and the other with LZ1AQ loop and Afdri.

NAVTEX 490 kHz log over 1000 km:

```

10644. No log from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-08-05 15:38:07 UTC
From: dl4ybp@...
Topic: 10644 Message: 10644

Hi all,

as there were not really interesting obervations to report in the past days I have turned to work in the house, painting the walls etc.
I will return as soon as I have finished or have been fed up with doing that. ;-)

73
Hans, DL4YBP

10645. Re: [navtexdx] No log from Lübbecke

Hello Hans,

Good luck with the paint job!
However the band can improve any moment!

73,
Roelof

10648. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-08-06 09:33:09 UTC
From: roelof@...
Topic: 70 Message: 10648

Hello all,

Just for the fun of it, I have been using three instances of YaND, two SDR's and two antennas.

Propagation in general was not very good and T/A propagation as found in the NDB band was way down compared to the previous days.

NAVTEX 490 kHz log over 1000 km:

```
20150805 2040 490 $03E IQM Mondolfo,ITA 1114
20150805 2141 490 $01K TFA Grindavik,ISL 2045

20150805 2142 518 $03K SVK Kerkyra,GRC 1821
20150805 2230 518 $03P 4XO Haifa,ISR 3307
20150805 2320 518 $03U IQM Mondolfo,ITA 1114
20150805 2336 518 $03V ICI Sellia Marina,ITA 1737
20150805 2351 518 $01X TFA Grindavik,ISL 2045
```

20150806 0019 518 $19C LGV Vardo,NOR 2527
20150806 0030 518 $01D OXJ Torshavn,FRO 1327
20150806 0033 518 $02D EAR Coruna,ESP 1283
20150806 0350 518 $04X VOK Labrador,CAN 3979

As expected, more stations were logged on the mini-whip.
However,VOK was decoded and properly flagged on the LZ1AQ loop,
whilst it was hidden in a message from LaGarde on the mini-whip:

LZ1AQ loop:

10649. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-08-06 17:40:43 UTC
From: david
Topic: 9398 Message: 10649

Hello All,

Many listeners have logged $20L Arkhangelsk on the list, but I had given it up as a lost cause, never to be heard here. So it was a nice surprise to get three clear messages in the log. And in the summer season, too.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Aug 6, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

Hello Roelof,
I guess both our whips were suffering co-channel interference from Valencia.I have been closely watching the 03:50 time slot lately.Valencia is normally quite strong at my QTH, with 100% perfect decodes:

```

As expected, more stations were logged on the mini-whip.
However,VOK was decoded and properly flagged on the LZ1AQ loop,
whilst it was hidden in a message from LaGarde on the mini-whip:
[...]

10651. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-08-07 09:31:24 UTC
From: david
Topic: 9398 Message: 10651

Hello All,

We have been spoilt in recent weeks by the unusual summertime propagation. Looking back 4 - 6 weeks ago, we were all complaining about the scarcity of signals, and were reporting just a handful for each session. But now, we feel cheated if there are only a dozen logs over 1000km. So I was looking sad as I went through last night's log, until I spotted another 'first' for me with $03P Haifa giving a strong signal.

Reception seems to be peaking earlier in the night, with a lot more signals before 0000z than there used to be.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Aug 7, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances
Report Sorted by Frequency and Time

Hello all,

I will continue to use two antennas for the time being and see if it makes much differnce on 518 kHz.

Decent propagation last night, but high static levels.

NAVTEX 490 kHz log over 1000 km:

```
20150806 2040 490 $03E IQM Mondolfo,ITA 1114

Hello Roelof,

interesting experiment !
I came back from holiday and
in the next few days I plan to build two new loops to be connected to
the amplifier LZ1AQ.

73, Maurizio

From: roelof@...
Topic: 70 Message: 10655

Hello Maurizio,

I will also try to use the loop and mini-whip in a phasing system.
Theoretically, this should provide 3 dB gain.

73,
Roelof

10656. Another Loop/Whip comparison

Hi all,
Another loop/whip comparison...-Loop pointing to Labrador + Lowe HF225-Whip + Perseus
Earlier experiments were confirmed again.A loop is not a loop at night (nulls disappear) , due to sky wave propagation incoming at high angles.

For distances > approx. 1500..2000Km, nulls are present: Arkhangelsk,Bodo and Vardo were not received on the loop.(Yes, the Lowe is somewhat less sensitive than the Perseus and has a much wider 2.2KHz IF bandwidth, but note that absolutely nothing was received from these 3 northern stations)
As evidenced by the reception of Haifa only on the loop (albeit with poor quality), and better quality decodes from Ismailia, the loop does help to suppress co-channel interference.
The bottom line: To catch them all, you need both antennas and 2 receivers! :0)
Regards - Dirk
